

SAGE Partnerships

The UN's Research4Life initiative encompasses the AGORA, HINARI, ARDI GOALI, and OARE programmes. The focus of these programmes is research on health, agriculture and the environment, but all STM, social science and humanities disciplines are represented.

GOALI (Global Online Access to Legal Information) give users in more than 115 developing countries access to a wide range of essential legal information for their work and studies.

The International Network for the Availability of Scientific Publications provides online access to research institutions in over 80 of the world's less developed countries, either free of charge or at greatly subsidized rates.

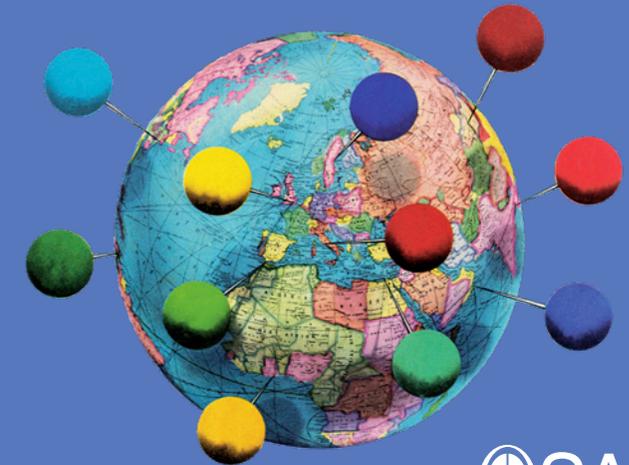

The eIFL Foundation supports the wide availability of electronic resources for library users in developing countries by helping to negotiate the creation of library consortia across multiple countries.

SAGE Publishing was founded with the mission to support the dissemination of knowledge, and a strong belief that knowledge knows no frontiers.

**Supporting
access to
research in the
developing world**

SAGE Publishing is committed to disseminating high-quality research and engaged scholarship globally. In service of this aim, we work with a number of organisations to bring scholarly material to libraries and researchers in the developing world. Through partnerships with several global initiatives including Research4Life, INASP and EIFL, we are pleased to offer more than **1,000** journals, as well as eBooks and other digital resources, to institutions in developing countries for free or at a greatly reduced price. This ensures that students, researchers and policy makers in the poorest nations have access to the latest peer-reviewed research in business, humanities, social science, science, technology and medicine.

Over **5,000**
developing world institutions have access via publisher partnerships

Over **100**
countries, across **5 continents**
with access to scholarly content

Over **1,000**
journals available to developing world researchers

 Working with SAGE has led the UNAH to an open door opportunity to access a vast world of scientific knowledge, allowing access to various sources of fundamental research information. It has helped strengthen the services offered to the researcher from the Library, positioning it as a place that contributes to the strengthening of research.

– **Patricia Villalobos Marquina,**
Central Library Coordinator,
UNAH, Honduras
