THE NECESSITY OF INTERCULTURAL COMMUNICATION

The history of our planet has been in great part the history of the mixing of peoples.

—Arthur M. Schlesinger Jr.
In 1804, the number of people on planet Earth was 1 billion. In 1927, 123 years later, it was 2 billion. By 1960, 33 years later, it was 3 billion. By 1974, 14 years later, it was 4 billion. Currently, there are over 7 and-a-half billion (i.e., 7,600,000,000) people on planet Earth. One human is born every 8 seconds and dies every 12 seconds, for a net gain of one person every 14 seconds. Of the 7.6 billion people on the planet, about 1.4 billion, or nearly 20%, are Chinese, and 1.3 billion, just over 17%, are East Indian. Approximately 330 million, or about 4.5%, reside in the United States; around 3.5% are Indonesian; and just under 3% are Pakistani. Over the past 200 years, the growth rate, distribution, and density of the world’s population have not been spread equally. Certain regions of the world have grown disproportionately in terms of the number of people, while other regions vary considerably in terms of population density (i.e., number of people per square mile). As seen in these statistics, China and India account for nearly 40% of the world’s population. African countries make up nearly 15% of the world’s population, while Europe constitutes about 11%.2

The purpose of the previous paragraph is to point out that the world’s population is growing disproportionately. Along with that, something else has grown disproportionately: technology and its decentralizing role in information dissemination. In 1948, the painter and writer Wyndham Lewis wrote about a “global village” in his book America and Cosmic Man. Several years later, his friend Marshall McLuhan also used the term to describe how technological advances of mass media would eventually disintegrate the natural time and space barriers inherent in human communication. McLuhan predicted that through the elimination of such barriers, people would continue to interact and live on a global scale—but one virtually transformed into a village.3

Twenty years into the 21st century, McLuhan’s vision of a global village is no longer considered an abstract idea but a near certainty. Technological changes have made Earth a smaller planet to inhabit. The technological ability of mass media and the Internet to bring events from across the globe into our homes, businesses, and schools dramatically reduces the distance between people of different cultures and societies.
Telecommunication systems, including e-mail, texting, and social networking sites such as Facebook, connect people throughout the world via satellites and fiber optics. Skype links people from across the planet in seconds.

The essential effect of this technology is its decentralizing role in disseminating information across local, regional, national, and international borders. This means that billions of people across the planet now have access to information not available to them only a few years ago. Information empowers people. The ease and speed with which people of differing cultures can now communicate is stunning. In 1780—nearly 240 years ago—when John Adams, the second president of the United States, corresponded with his European counterparts in France, it would take as long as 6 months to send and receive letters, as they traveled by ship across the Atlantic Ocean. Imagine sending a text message to a friend that takes half a year to arrive! Today, it takes less than a second. Moreover, the sheer frequency and quantity of messages sent is baffling compared with only a few years ago. E-mail is now the most pervasive form of communication on the planet. But other technologies are also formative, including social networking (e.g., Facebook), instant/text messaging, and chat. The Radicati Group estimates that in 2020 there will be over 300 billion e-mails sent/received per day. They estimate that by 2022 there will be over 4 billion e-mail users across the globe.4

Of course, e-mail is only one of the technological advances facilitating communication across cultures. The Internet and cell phone communication has become a dominant and powerful source of information for billions of people across the planet. Ananya Bhattacharya writing for QuartzIndia predicts that by 2022, there will be over 830 million smartphone users in India. That’s almost three times the total number of people in the United States! And while many may think that the United States is the cell phone capital of the world, it actually ranks third. The top 10 countries with the highest cell phone subscriptions include, in order, China, India, United States, Brazil, Russia, Indonesia, Nigeria, Bangladesh, Japan, and Pakistan.5 Technology has linked the world.

Many college students in the United States have a Facebook account or are at least familiar with the social networking site. But unlike e-mail or smartphones, social networking sites such as Facebook are intentionally designed to establish and maintain relationships. Initiating a relationship with someone from across the globe is much easier now than it was only a few years ago. According to Facebook’s own records, as of March of 2019, there were over 1.5 billion active Facebook users.6

Although these technological advances facilitate the initiation and maintenance of cross-cultural relationships, the late noted historian and Pulitzer Prize winner Arthur Schlesinger warned us that history tells an ugly story of what happens when people of diverse cultural, ethnic, religious, or linguistic backgrounds converge in one place. The hostility of one group of people against another, different group of people is among the most instinctive of human drives. Xenophobia—the fear or contempt of that which is foreign or unknown, especially of strangers or those perceived as foreigners—is believed by many to be an innate biological response to intergroup competition. Indeed, Schlesinger contended that unless a common goal binds diverse people together, tribal hostilities will drive them apart. By replacing the conflict of political ideologies that dominated in the 20th century, ethnic, religious, and racial strife will continue in the 21st century as the explosive issue.7
THE NEED FOR INTERCULTURAL COMMUNICATION

International tensions around the globe are striking examples of the need for effective and competent intercultural communication. For example, although it was several years ago, an international incident with potentially global consequences occurred between the People's Republic of China and the United States, stressing the need for competent intercultural communication. The incident began on April 1, 2001, when a U.S. Navy surveillance plane collided with a Chinese fighter jet in international airspace over the South China Sea. As a result of the collision, the U.S. plane—an EP-3 electronic warfare and surveillance aircraft—was damaged and nearly crashed. However, because of heroic efforts on the part of the crew, the plane landed safely at a Chinese air base. The 24-member crew of the U.S. plane was detained by the Chinese military. China and the United States disagreed as to the cause of the collision, each side blaming the other.

In the days and weeks following the incident, contentious negotiations took place between Chinese and U.S. officials over the release of the U.S. crew. For their release, China demanded that the United States accept responsibility and apologize for the collision. The United States refused, arguing that the collision was the fault of the Chinese pilot. In the meantime, public pressure was mounting on the president of the United States to secure the crew’s release. On April 4, the U.S. secretary of state expressed “regret” over the collision and the disappearance of the Chinese pilot. Although Chinese officials acknowledged the statement as a move in the right direction, they insisted that the United States apologize for the incident. On April 8, the vice president of the United States and the secretary of state rejected China’s demands for an apology but expressed “sorrow” for the disappearance of the Chinese pilot. They also drafted a letter of sympathy to the pilot’s wife. The Chinese continued to demand an apology. On April 10, U.S. officials said that the president would be willing to offer the Chinese a letter expressing regret over the incident, including a statement admitting that the U.S. aircraft landed in Chinese territory without seeking permission. The Chinese continued to demand an apology.

Finally, on April 11, the United States issued a letter to the Chinese foreign minister, asking him to “convey to the Chinese people and to the family of Pilot Wang Wei that we are very sorry for their loss.” The letter continued, “We are very sorry the entering of China's airspace and the landing did not have verbal clearance.” To be sure, the word *apology* did not appear in the letter. But in their announcement of the letter to the Chinese people, Chinese officials chose to translate the double “very sorry” as “shenbiao qianyi,” which, in Chinese, means a deep expression of apology or regret not used unless one is admitting wrongdoing and accepting responsibility for it. Based on that letter and the subsequent translation, China agreed to release the U.S. crew. John Pomfret of the Washington Post Foreign Service asserted, “In the end, it was a matter of what the United States chose to say and what China chose to hear.” Apparently, such delicacies in communication are common during U.S.—China negotiations. According to Bates Gill, who was then the director of the Center for Northeast Asian Policy Studies at the Brookings Institution, U.S. negotiators often use words such as *acknowledge* that, when translated into Chinese, mean *admit* or *recognize* so that the Chinese can interpret such wordings as an admission of U.S. guilt.
Indeed, national conflicts within our own borders, often ignited by racial, religious, and ethnic tensions, underscore the necessity for skillful intercultural communication. But perhaps more important, the need for competent intercultural communication is felt intrapersonally, within our own personal, social, and professional lives and relationships. Consider the situations discussed in An Intercultural Conversation box that Jim, an undergraduate student at a Midwestern university, has faced in the past few days.

**AN INTERCULTURAL CONVERSATION**

**Situation #1**
Jim has just met Bridget, an exchange student from England. They are talking in Jim’s dorm room.

Jim: So, Bridget, are you enjoying your first few days in the United States?
Bridget: Yes, but I am a bit paggered, you know. Got pissed last night.
Jim: Oh... sorry... are you having problems with someone? Can I help?
Bridget: Nota’tall, ohno, nothing traumatic—just farty things, you know. Nothing to have a dicky fit over.
Jim: Ah, yeah, right. Jim’s girlfriend, Betsy, enters the room.
Betsy: Hello.
Jim: Hi, Betsy! Hey, this is Bridget. She’s from England.
Betsy: Hi, Bridget.
Bridget: Hello. Nice to meet you. Jim and I were just having a bit of intercourse. Won’t you join us?
Betsy: You were what?! [Leaves the room.]

**Situation #2**
Later that same day, Jim is trying to explain to Betsy that nothing was happening between him and Bridget when Jahan, an exchange student from India, enters the room unannounced.

Jahan: Hello, Jim. Who is this with you?
Jim: Oh, hi, Jahan. This is Betsy. Betsy, this is Jahan. He lives just down the hall.
Betsy: Hi, Jahan.
Jahan: Is this your girlfriend, Jim?
Jim: Ah... yeah, she is.
Jahan: Are you two going to marry? Have children?
Jim: Ah, well...
Betsy: Uh... we really haven’t discussed that.
Jahan: Oh, I see. Is your family not wealthy enough for her, Jim? What is your father’s occupation?

Unfortunately, Jim has found himself in some rather awkward situations. The misinterpretations in Situation #1 and Situation #2 are due mostly to cultural and linguistic differences. In Bridget’s England, for example, the word *paggered* means tired. The colloquialism *pissed* means to get drunk, *farty* refers to something insignificant, a *dicky fit* is...
an emotional outburst, and *intercourse* simply means to have a conversation. Translated in terms Jim can understand, Bridget was tired because she had been drunk the night before, but she did not think it significant enough to complain. Upon meeting Betsy, she simply invited her into the conversation.

The second conversation is a bit more complicated. The late Dr. Pittu Laungani, the well-known Indian-born psychologist, wrote extensively about the culture of his native India. In his writings, Laungani asserted that Indians tend to initiate social conversations with complete strangers quite easily. According to Laungani, Indians often ask, without embarrassment, very personal and delicate questions concerning one’s age, marital status, occupation, income, religious beliefs, and so on. Laungani professed that Westerners need to learn that these questions are not to be taken with any offense.9

**Benefits of Intercultural Communication**

Although the challenges of an increasingly diverse world are great, the benefits are even greater. Communicating and establishing relationships with people from different cultures can lead to a whole host of benefits, including healthier communities; increased international, national, and local commerce; reduced conflict; and personal growth through increased tolerance (see Table 1.1).

**Healthy Communities**

Joan England argues that genuine community is a condition of togetherness in which people have lowered their defenses and learned to accept and celebrate their differences. England contends that we can no longer define equality as “sameness” but, instead, must value our differences—whether they be in race, gender, ethnicity, lifestyle, or even occupation or professional discipline.10 Healthy communities are made up of individuals working collectively for the benefit of everyone, not just their own group. Through open and honest intercultural communication, people can work together to achieve goals that benefit everyone, regardless of group or culture, including the global community in the home, business, or neighborhood. Healthy communities support all community members and strive to understand, appreciate, and acknowledge each member.

**Increased Commerce**

Our ability to interact with persons from different cultures, both inside and outside our borders, has immense economic benefits. In 2019, the top 10 countries with which the United States traded—in terms of both imports and exports—were, in order, Mexico, Canada, China, Japan, Germany, South Korea, the United Kingdom, France, Taiwan, and India. In just the first three months of 2019, U.S. trade with these countries accounted for over $1 trillion (i.e., $1,000,000,000,000). There are significant cultural differences among these 10 countries. Hence, only through successful intercultural communication can such economic potentials be realized.11
Reduced Conflict
Conflict is inevitable; we will never be able to erase it. We can, however, through cooperative intercultural communication, reduce and manage conflict. Often, conflict stems from our inability to see another person’s point of view, particularly if that person is from a different culture. We develop blatant negative generalizations and stereotypes about the person, which are often incorrect and lead to mistrust. Such feelings lead to defensive behavior, which fosters conflict. Jack Gibb is well known for his classic work on defensive and supportive communication. Gibb points out that messages that carry judgements of right or wrong, attempt to control others, are not open to different ideas, demonstrate a lack of interest, suggest that one is superior to another, and assert one’s certainty, lead to defensive competitive and even destructive conflict. Gibb maintains that communicating messages that are descriptive rather than judgmental, focus on the issue not the person, demonstrate empathy and equality, and are provisional and flexible, lead to supportive behaviors and reduced conflict. If we can learn to think and act cooperatively with others who may not be similar to us by engaging in supportive rather than defensive communication, we can effectively manage and reduce conflict with others.

Personal Growth Through Tolerance
As you communicate with people from different cultures, you learn more about them and their way of life—including their values, history, and habits—and the substance of their personality. As your relationship develops, you start to understand them better, perhaps even empathizing with them. One of the things you will learn (eventually) is that although your cultures are different, you have much in common. As humans, we all have the same basic desires and needs; we just have different ways of achieving them. As we learn that our way is not the only way, we develop a tolerance for difference. This can be accomplished only when we initiate relationships with people who are different from ourselves. We could learn far more about Japanese culture by initiating and maintaining a relationship with a Japanese student at our college or university than we could by traveling to Japan for a 2- or 3-week vacation. Moreover, although this may sound contradictory, the more we learn about others and other cultures, the more we begin to learn about ourselves. When we observe how others conduct their lives, we begin to understand how we conduct our own lives.

Diversity in the United States
One need not travel to faraway countries to understand the need for and experience the benefits of intercultural communication. Largely because of immigration trends, cultural and ethnic diversity in the United States is a fact of life. Immigrants, in record numbers, are crossing U.S. borders. Jynnah Radford and Abby Budman of the Pew Research Center report that there were nearly 44 million immigrants living in the United States in 2016, making up 13.5% of the nation’s population. This number represents a more than fourfold increase since 1960. At that time, just under 10 million immigrants lived in the United States, accounting for about 5% of the population. Radford and Budman note that while the growth rate has begun to decline in recent years, the number of immigrants living in the United States is projected to double by 2065. Radford and Budman
also note that there has been a significant shift in the countries of origin among the immigrant population. According to their report, in 1960, 84% of immigrants coming to the United States were born in Europe or Canada while only 6% were from Mexico and 3.8% from South and East Asia. By 2016, European and Canadian immigrants made up only a small share of the foreign-born population, while Mexicans (26.5%) South and East Asians (26.9%) and other Latin Americans (24.5%) immigrants each make up about a quarter of the U.S. immigration population followed by about 8% who were born in another region.13

In addition to the rapid growth of diverse populations in the United States, another trend is emerging: An increasing number of groups are revitalizing their ethnic traditions and promoting their cultural and ethnic uniqueness through language. Language is a vital part of maintaining one’s cultural heritage, and many people are protective of their native language. A sensitive issue among many U.S. citizens is the status of the English language. Over the years, many federal lawmakers have proposed legislation making English the official language of the United States. According to Radford and Budman, the number of immigrants who are proficient in English has significantly declined since 1980. They report that immigrants who speak only English at home fell from 30% in 1980 to 16% in 2016. The number of immigrants who speak English “very well” increased from 27% to 35% over the same time period, however. Among immigrants, of the various languages spoken at home, 43% speak Spanish, 16% speak English only, 6% speak Chinese, 5% speak Hindi and related languages, 4% speak Filipino, 3% speak French, 3% speak Vietnamese, and 2% speak Arabic.14

In July 2002, in Brown County, Wisconsin—a county with a sizable Hmong and Hispanic community—the county board of commissioners made English the official language of its government and called for more spending to promote English fluency. The all-White Brown County board voted 17 to 8 to approve the measure. “It’s saying this is our official language. This is what we believe in, and we should encourage English,” said then–Board Supervisor John Vander Leest. On the other hand, in August 2004 the Texas border town of El Cenizo—whose population is heavily Hispanic—adopted Spanish as its official language. Mayor Rafael Rodriguez said that he and most of the town’s residents speak only Spanish. According to Rodriguez, “In past administrations, the meetings were done in English and they did not explain anything.” The vote means that town business will be conducted in Spanish, which then will be translated into English for official documents to meet the requirements of Texas law. Rodriguez said the city council’s intent was not to usurp English or create divisions but to make local government more accessible to the town’s residents. “What we are looking for is that the people of the community who attend the meetings and who only speak Spanish be able to voice their opinions,” Rodriguez said.15
Although the United States prides itself on being a nation of immigrants, there is a growing sense of uncertainty, fear, and distrust among different cultural, ethnic, and linguistic groups. These feelings create anxiety that can foster separatism rather than unity. Many people are frustrated, confused, and uncertain about these linguistic and definitional issues. Only through intercultural communication can such uncertainty be reduced. Only when diverse people come together and interact can they unify rather than separate. Unity is impossible without communication. Intercultural communication is a necessity.

**HUMAN COMMUNICATION**

Communication is everywhere. Every day, everywhere, people are communicating. Even when alone, people are bombarded with communication. Communication professor Charles Larson estimated that in 2013 most U.S. citizens were exposed to more than 5,000 persuasive messages every day. Most people would be miserable if they were not allowed to communicate with others. Indeed, solitary confinement is perhaps the worst form of punishment inflicted on humans. Human communication—that is, the ability to symbolize and use language—separates humans from animals. Communication with others is the essence of what it means to be human. Through communication, people conduct their lives. People define themselves via their communication with others. Communication is the vehicle by which people initiate, maintain, and terminate their relationships with others. Communication is the means by which people influence and persuade others. Through communication, local, regional, national, and international conflicts are managed and resolved.

Ironically, however, communication—and particularly one’s style of communication—can be the source of many interpersonal problems. Marriage counselors and divorce lawyers indicate that a breakdown in communication is one of the most frequently cited reasons for relational dissolution in the United States. A specific kind of communication—that is, public speaking—is one of the most frequently cited fears, even more feared than death.

This book is about the ubiquitous subject labeled communication. Specifically, this is a book about intercultural communication—that is, communication between people of different cultures and ethnicities. Intercultural communication occurs whenever two or more people from different cultures come together and exchange verbal and nonverbal messages. Throughout the course of this book, you will be introduced to a whole host of concepts and theories that explain the process of people of differing cultural backgrounds coming together and exchanging verbal and nonverbal messages.

**The Nature of Human Communication**

Because of its ubiquitous nature, communication is difficult to define. If you were to go to your university library and select 10 different introductory communication texts, each would probably offer a different definition of communication. Although there is no universally agreed-on definition of communication, most communication scholars agree on certain dimensions of communication that describe its nature.
Communication is a process. A **process** is anything that is ongoing, ever changing, and continuous. A process is not static or at rest; it is always moving. Communication is always developing; it is never still or motionless. That communication is a process means that communication is **dynamic**. The terms **process** and **dynamic** are closely related. Part of what makes communication a process is its dynamic nature. Something that is **dynamic** is considered active or forceful. Because communication is a dynamic process, it is impossible to capture its essence in a written definition or graphic model. Communication is **interactive** and **transactive** because it occurs between people. Communication requires the active participation of two people sending and receiving messages at the same time—that is, as we are sending messages we are simultaneously receiving messages (transactive). That communication is **symbolic** is another fundamental assumption guiding most communication scholars. A **symbol** is an arbitrarily selected and learned stimulus that represents something else. Symbols can be verbal or nonverbal. They are the vehicle by which the thoughts and ideas of one person can be communicated to another person. Messages are constructed with verbal and nonverbal symbols. Through symbols, meanings are transferred between people. Symbols (i.e., words) have no natural relationship with what they represent (they are arbitrarily selected and learned). For example, the verbal symbols “C-A-T” have no natural connection with cute, fuzzy animals that purr and like to be scratched. These particular symbols have no meaning in any languages besides English (see Figure 1.1).

Nonverbal symbols are arbitrary as well. Showing someone your upright middle finger may not communicate much in some cultures. Verbal and nonverbal symbols are meaningful only to people who have learned to associate them with what they represent. People can allow just about any symbols they want to represent just about anything they want. For example, you and your friends probably communicate with one another using private symbols that no one else understands. You have your own secret code. You have words, phrases, gestures, and handshakes that only you and your friends know, understand, and use. This allows you to communicate with one another in your own “foreign” language.

Most communication is intentional, meaning that it is performed consciously. Intentional communication exists whenever two or more people consciously engage in interaction with some purpose. Unintentional communication may exist, however. For example, you pass a friend in the hallway of your dorm, say hello, and your friend does not respond. Perhaps your friend simply didn’t see you and was thinking about the exam he or she just failed and was not intentionally ignoring you. In this book, the type of communication that will be discussed is intentional communication. This book takes the position that intentional communication, either verbal or nonverbal, is more informative than unintentional communication. Communication is dependent on the context in which it occurs. **Context** refers to the cultural, physical, relational, and perceptual environment in which communication occurs. In many ways, the context defines the meaning of any message. With whom and where you interact significantly alters the messages sent. That

</table>

**context** The cultural, physical, social, and psychological environment.

**process** Anything ongoing, ever changing, and continuous.

**dynamic** Something considered active and forceful.

**symbol** An arbitrarily selected and learned stimulus representing something else.
communication is ubiquitous simply means it is everywhere, done by everyone, all the time. Wherever one goes, some communication is happening.

Finally, culture shapes communication, and communication is culture bound. People from different cultures communicate differently. The verbal and nonverbal symbols we use to communicate with our friends and families are strongly influenced by our culture. Perhaps the most obvious verbal communication difference between two cultures is language. Even cultures speaking the same language, however, have different meanings for different symbols. For example, although English is the dominant language spoken in the United States and England, many words and phrases have different meanings between these two cultures. In England, to “bomb” an examination is to have performed very well.

Communication, then, is the ubiquitous, dynamic, interactive process of encoding and decoding verbal and nonverbal messages within a defined cultural, physiological, relational, and perceptual context. Although many of our messages are sent intentionally, some others—perhaps our nonverbal messages—can unintentionally influence other people.18

Human Communication Apprehension

Although communication is difficult to define, we know that people begin to communicate at birth and continue communicating throughout their lives. We also know that many people experience fear and anxiety when communicating with others, particularly in situations such as public speaking, class presentations, a first date, or a job interview. The fear or anxiety people experience when communicating with others is called communication apprehension. In the past 50 years, a substantial body of research has accumulated regarding the nature and prevalence of communication apprehension. The late Jim McCroskey, considered the father of this concept, believed that nearly everyone experiences some kind of communication apprehension sometimes, but roughly one in five adults in the United States suffer from communication apprehension every time they communicate with others. McCroskey said that experiencing communication apprehension is normal; that is, all of us experience it occasionally. McCroskey argued that there are four types of communication apprehension: traitlike, context based, audience based, and situational. Traitlike communication apprehension is an enduring general personality predisposition where an individual experiences communication apprehension most of the time across most communication situations. Of all adults in the United States, 20% experience traitlike communication apprehension.

Context-based communication apprehension is restricted to a certain generalized context, such as public speaking, group meetings, or job interviews. Persons with context-based communication apprehension experience anxiety only in certain contexts. Audience-based communication apprehension is triggered not by the specific context but by the particular person or audience with whom one is communicating. Hence, persons with audience-based communication apprehension may experience anxiety when communicating with strangers or their superiors, for example. College students with audience-based communication apprehension may experience anxiety when communicating with professors but not when communicating with other students. Finally, situational-based communication apprehension, experienced by virtually everyone, occurs with the combination of a specific context and a specific audience. For example, students may
feel anxious interacting with professors only when they are alone with the professor in the professor’s office. At other times, perhaps in the hallways or in the classroom, interacting with the professor may not be a problem. To repeat, virtually everyone experiences communication apprehension at some time; if you experience such anxiety, it does not mean you are abnormal or sick.

What follows is the Personal Report of Communication Apprehension (PRCA-24), a scale designed to measure your degree of communication apprehension. Take a few moments and complete the scale in Self-Assessment 1.1.

**SELF-ASSESSMENT 1.1**

**PERSONAL REPORT OF COMMUNICATION APPREHENSION**

**Directions:** This instrument is composed of 24 statements concerning your feelings about communicating with other people. Please indicate in the space provided the degree to which each statement applies to you by marking whether you (1) strongly agree, (2) agree, (3) are undecided, (4) disagree, or (5) strongly disagree with each statement. There are no right or wrong answers. Many of the statements are similar to other statements. Do not be concerned about this. Work quickly; just record your first impressions.

____ 1. I dislike participating in group discussions.

____ 2. Generally, I am comfortable while participating in group discussions.

____ 3. I am tense and nervous while participating in group discussions.

____ 4. I like to get involved in group discussions.

____ 5. Engaging in group discussions with new people makes me tense and nervous.

____ 6. I am calm and relaxed while participating in group discussions.

____ 7. Generally, I am nervous when I have to participate in group discussions.

____ 8. Usually, I am calm and relaxed while participating in meetings.

____ 9. I am very calm and relaxed when I am called upon to express an opinion at a meeting.

____ 10. I am afraid to express myself at meetings.

____ 11. Communicating at meetings usually makes me uncomfortable.

____ 12. I am very relaxed when answering questions at a meeting.

____ 13. While participating in a conversation with a new acquaintance, I feel very nervous.

____ 14. I have no fear of speaking up in conversations.

____ 15. Ordinarily, I am very tense and nervous in conversations.

____ 16. Ordinarily, I am very calm and relaxed in conversations.

____ 17. When conversing with a new acquaintance, I feel very relaxed.

____ 18. I am afraid to speak up in conversations.

____ 19. I have no fear of giving a speech.

(Continued)
THE NATURE OF CULTURE

Like communication, culture is ubiquitous and has a profound effect on humans. Culture is simultaneously invisible yet pervasive. As we go about our daily lives, we are not overtly conscious of our culture’s influence on us. How often have you sat in your dorm room or classroom, for example, and consciously thought about what it means to be a U.S. citizen? As you stand in the lunch line, do you say to yourself, “I am acting like a U.S. citizen”? As you sit in your classroom, do you say to yourself, “The professor is really acting like a U.S. citizen”? Yet most of your thoughts, emotions, and behaviors are culturally driven. One need only step into a culture different from one’s own to feel the immense impact of culture.
Culture has a direct influence on the physical, relational, and perceptual contexts. For example, the next time you enter your communication classroom, consider how the room is arranged physically, including where you sit and where the professor teaches, the location of the chalkboard, windows, and so on. Does the professor lecture from behind a lectern? Do the students sit facing the professor? Is the chalkboard used? Next, think about your relationship with the professor and the other students in your class. Is the relationship formal or informal? Do you interact with the professor and students about topics other than class material? Would you consider the relationship personal or impersonal? Finally, think about your perceptual disposition—that is, your attitudes, motivations, and emotions about the class. Are you happy to be in the class? Do you enjoy attending? Are you nervous when the instructor asks you a question? To a great extent, the answers to these questions are contingent on your culture. The physical arrangement of classrooms, the social relationship between students and teachers, and the perceptual profiles of the students and teachers vary significantly from culture to culture.

Like communication, culture is difficult to define. To be sure, more than 60 years ago, two well-known anthropologists, Alfred Kroeber and Clyde Kluckhohn, found and examined 300 definitions of culture, no two of which were the same. Perhaps too often, people think of culture only in terms of the fine arts, geography, or history. Small towns or rural communities are often accused of having no culture. Yet culture exists everywhere. There is as much culture in Willard, New Mexico (population 240), as there is in New York, New York (population 8,500,000). The two cultures are just different. Simply put, culture is people.

Although there may not be a universally accepted definition of culture, there are a number of properties of culture that most people would agree describe its essence. In this book, culture is defined as an accumulated pattern of values, beliefs, and behaviors shared by an identifiable group of people with a common history and verbal and nonverbal symbol systems.

Accumulated Pattern of Values, Beliefs, and Behaviors

Cultures can be defined by their value and belief systems and by the actions of their members. People who exist in the same culture generally share similar values and beliefs (see Table 1.2). In the United States, for example, individuality is highly valued. An individual’s self-interest takes precedence over group interests. U.S. citizens believe that people are unique. Moreover, U.S. citizens value personal independence. Conversely, in Japan, a collectivistic and relatively homogeneous culture—a sense of groupness and group harmony—is valued. Most Japanese see themselves as members of a group first and as individuals second. Where U.S. citizens value independence, Japanese value interdependence. The values of a particular culture lead to a set of expectations and rules prescribing how people should behave in that culture. Although many U.S. citizens prefer to think of themselves as unique individuals, most of them behave in similar ways. Observe the students around you in your classes. Although you may prefer to think that you are very different from your peers, you are really quite similar to them. Most of your peers follow a similar behavioral pattern to your own. For example, on a day-to-day basis, most of your peers attend classes, take examinations, go to lunch, study, party, and write papers.

U.S. citizens share a similar behavioral profile. Most work an average of 40 hours a week, receive some form of payment for their work, and pay some of their earnings in
Intercultural Communication

taxes. Most spend their money on homes and cars, and almost every home in the United States has a television. Although U.S. citizens view themselves as unique individuals, most of them have similar behavioral patterns.

An Identifiable Group of People With a Common History

Because the members of a particular culture share similar values, beliefs, and behaviors, they are identifiable as a distinct group. In addition to their shared values, beliefs, and behaviors, the members of a particular culture share a common history. Any culture's past inextricably binds it to the present and guides its future. At the core of any culture are traditions that are passed on to future generations. In many cultures, history is a major component of the formal and informal education systems. To learn a culture's history is to learn that culture's values. One way children in the United States develop their sense of independence, for example, is by learning about the Declaration of Independence, one of this country's most sacred documents. Elementary school children in Iran learn about the historical significance of the political and religious revolution that took place in their culture in the 1970s and 1980s. Russian children learn about the arts in Russian history—for example, famous Russian composers, including Tchaikovsky, Rachmaninoff, and Stravinsky. The art of the past helps Russians remember their culture and history as they face disruptive social and political crises. Such historical lessons are the glue that binds people together.

Verbal and Nonverbal Symbol Systems

One of the most important elements of any culture is its communication system. The verbal and nonverbal symbols with which the members of a culture communicate are culture bound. Seeing the difference between the verbal codes of any two cultures is easy. For instance, the dominant verbal code in the United States is English, whereas the dominant verbal code in Mexico is Spanish. But although two cultures may share the same verbal code, they may have dramatically different verbal styles. Most White U.S. citizens, for example, use a direct, instrumental, personal style when speaking English. Many Native Americans/American Indians who also speak English use an indirect, impersonal style and may prefer the use of silence over words.21

Nonverbal code systems vary significantly across cultures as well. Nonverbal communication includes the use of body language, gestures, facial expressions, voice, smell, personal and geographical space, time, and artifacts. Body language can communicate a great deal about one's culture. When an adult interacts with a young child in the United States, for example, it is not uncommon for the adult to pat the child's head. This nonverbal gesture is often seen as a form of endearment and is culturally acceptable. In Thailand, however, where the head is considered the seat of the soul, such a gesture...

is unacceptable. Belching during or after a meal is viewed by most U.S. citizens as rude and impolite, perhaps even disgusting. But in China, slurping and making belching noises during a meal simply mean one is enjoying the food.

People also communicate nonverbally through smell. U.S. citizens, in particular, seem obsessed with the smell of the human body and home environment. Think of all the products you used this morning before you left for class that were designed to mask the natural scent of your body, including soap, toothpaste, mouthwash, deodorant, and cologne and/or perfume. Persons from other cultures often complain that U.S. citizens tend to smell antiseptic.

**Microcultural Groups**

Within most cultures, groups of people—or microcultures—coexist within the mainstream society. Microcultures exist within the broader rules and guidelines of the dominant cultural milieu but are distinct in some way, perhaps racially or linguistically, or via their sexual orientation, age, or even occupation. In some ways, everyone is a member of some microcultural group. Microcultures often have histories that differ from the dominant cultural group. In many cases, microcultural groups are considered subordinate or treated subordinately in some way, perhaps politically or economically.
In the United States, Native American/American Indian tribes might be considered microcultures. The Amish of Lancaster County, Pennsylvania, also can be considered a microcultural group. Although the Amish are subject to most of the same laws as any other group of citizens, they have unique values and communication systems that differentiate them from mainstream American life. For example, Amish children are exempt from compulsory attendance in public schools after the eighth grade. Although almost all Amish speak English, when they interact among themselves, they speak German. During church services, a form of High German is used. Hence, most Amish of Lancaster County speak three languages.

THE STUDY OF INTERCULTURAL COMMUNICATION

Ideally, we now have an understanding of the word communication and the idea of culture. So what happens when people from different cultures come together and communicate with one another? We call that process “intercultural communication.” Compared with many other academic disciplines, the study of intercultural communication is young. The histories of other academic fields such as math, biology, philosophy, and psychology date back hundreds and, in some cases, thousands of years. But the academic discipline of intercultural communication can be traced back only a few decades—specifically, to the year 1959 and the publication of Edward T. Hall’s book *The Silent Language*. Hall is generally recognized as the founder of the academic discipline we call intercultural communication. Although the term intercultural had been used prior to Hall’s work, it is thought that Hall was the first to use the term intercultural communication.

Hall held three university degrees (i.e., BA, MA, and PhD) in anthropology. Anthropology is the study of the origin, behavior, and physical, social, and cultural development of humans. Hall earned his doctorate in anthropology in 1942 when the United States was involved in the Second World War. During this period, traditional approaches in anthropology focused on studying a single culture at a time. So a particular anthropologist might focus his or her studies on, say, the Navajo or Hopi Indians of the American Southwest, as did Hall. Hall often referred to this as a macrolevel approach to culture. Among the many significant influences on Hall’s approach to his studies was anthropologist Franz Boas. The term cultural relativism is often attributed to him.

Boas believed, as did Hall, that humans are inherently ethnocentric (i.e., believing that one’s native culture is the standard by which other cultures are observed and judged) and that our observations of other cultures are necessarily biased in favor of our native cultural background. For example, a child raised in Germany, Iran, or China is taught that his or her cultural traditions, values, and customs are the preferred and accepted standards by which one should conduct one’s life. Consequently, an individual from a particular culture cannot draw conclusions about some other culture’s traditions, values, and customs without some inherent bias. Moreover, Boas believed that any particular culture is an adaptation to and a distinctive product of a unique set of historical, social, and environmental conditions. As these conditions vary, cultures vary accordingly—and, in this sense, there is no correct culture.
Following World War II, the U.S. Congress established the Foreign Service Institute (FSI). FSI is the federal government’s primary training institution for officers and support personnel of the U.S. foreign affairs community, preparing American diplomats and other professionals to advance U.S. foreign affairs interests overseas and in Washington. In the early 1950s, Hall taught at FSI and soon discovered that the traditional ways of teaching about macrolevel culture, from an anthropological perspective, were not effective in training FSI personnel how to interact with persons from different cultures. So Hall and others began to rethink how to teach about culture and soon developed a new curriculum that eventually became known as intercultural communication.

In this new curriculum, scholars focused on intercultural communication—that is, how people from different cultures interact with one another—rather than on how members of a particular culture interact within their culture. This new curriculum also emphasized the nonverbal elements of intercultural communication. Hall was especially interested in the study of how cultures manage the nonverbal channels of time (chronemics), space (proxemics), and body language (kinesics). One of Hall’s most fascinating insights was how invisible culture is to its own members—that is, how most people are so unaware of their own cultural ways of living. This new approach also embraced Boas’s idea of cultural relativism in that cultures should be judged only from within their specific cultural context, and cultural traditions, beliefs, and behaviors are to be evaluated on that culture’s unique set of historical, social, and environmental conditions.

In 1959, Hall published The Silent Language, which sold more than 500,000 copies in its first 10 years and is considered the seminal work in the field. In the book, Hall asserted that culture is communication. By the late 1960s, we saw the first intercultural communication courses being offered at universities. In 1970, the International Communication Association established a Division of Intercultural Communication. L. S. Harms’s 1970 book, Intercultural Communication, is thought to be the first textbook on the subject. By 1975, the Speech Communication Association established the Division of Intercultural Communication, and in 1977, the International Journal of Intercultural Relations began publication.

A Contextual Model of Intercultural Communication

Intercultural communication occurs whenever a minimum of two persons from different cultures or microcultures come together and exchange verbal and nonverbal symbols. A central theme throughout this book is that intercultural communication is contextual. A contextual model of intercultural communication is presented in Figure 1.2. According to the model, intercultural communication occurs within and between a variety of interconnected contexts, including cultural, microcultural, environmental, perceptual, and sociorelational contexts.

The term context refers to the setting, situation, circumstances, background, and overall framework within which communication occurs. For example, when you interact with your friends, you interact in some physical context, such as your dorm room. You also interact within a social context—that is, friend to friend. You also interact within a psychological context—your thoughts and emotions about your friend. The contextual model of intercultural communication attempts to identify the various contexts that define what happens when a person from Culture A communicates with a person from Culture B. As we walk through the contextual model of intercultural communication, please note that
The model is both conceptually and graphically consistent.

The largest, outer circle of the model represents the cultural context. All communicative exchanges between persons occur within some culture. The cultural context represents an accumulated pattern of values, beliefs, and behaviors shared by an identifiable group of people with a common history and verbal and nonverbal symbol systems. So whenever you and someone from a different culture come together and interact, you are within a cultural context. In this textbook, the cultural context is the focus of Chapter 2.

The next largest circle in the model is the microcultural context (Figure 1.3). As mentioned earlier, within most cultures separate groups of people coexist. These groups, called microcultures, are in some way different from the larger cultural milieu. Sometimes the difference is via ethnicity, race, or language. Conceptually, microcultures exist within a larger culture; notice that in the model, the microculture is within the cultural context. Often, microcultures are treated differently by the members of the larger culture. Some people refer to microcultural groups as minority groups or subcultures, but those terms will not be used here. Microcultures are the focus of Chapter 3.

The next largest circle in the model is the environmental context (Figure 1.4). This circle represents the physical, geographical location of the interaction. While culture prescribes the overall rules for communication, the physical location indicates when and where the specific rules apply. For example, in the United States, there are rules about yelling. Depending on the physical location, yelling can be prohibited or encouraged. In a church, yelling is generally prohibited, whereas at a football game, yelling is the preferred method of communicating. The environmental context includes the physical geography, architecture, landscape design, and even climate of a particular culture.
All these environmental factors play a key role in how people communicate. In the model, the environmental context is within the microcultural and cultural contexts. Conceptually, this is because one’s culture and membership in microcultural groups significantly influence how one perceives the environment. For example, temperatures below 32 degrees (i.e., freezing) are not thought of as extreme to a person raised in International Falls, Minnesota. But to a person raised in Tucson, Arizona, such temperatures may seem unbearable. In this book, the environmental context is discussed in Chapter 4.

In Figure 1.5, the two circles within the environmental context represent the perceptual context(s). The perceptual context refers to the individual characteristics of each interactant, including cognitions, attitudes, dispositions, and motivations. Specifically, the perceptual context refers to how an individual gathers, stores, and retrieves information. Humans gather information via their senses—that is, through sight, sound, taste, touch, and smell. We then store the information in our memories and retrieve it for later use. Although the ability to gather, store, and retrieve information is fundamentally human, it is also affected by culture. Many of the attitudes, beliefs, and values you hold were taught to you by your culture. For example, what smells good to you is cultural. The music you listen to is also largely a cultural by-product. Moreover, how an individual develops attitudes about others, including stereotypes, varies from culture to culture. The perceptual context is the emphasis of Chapter 5.

The circles connecting the perceptual contexts in the model form the sociorelational context (Figure 1.6). This refers to the relationship between the interactants. Whenever two people come together and interact, they establish a relationship. Within this context,
relationship, each person assumes a role. Right now, you are assuming the role of student; the person teaching your communication class is assuming the role of teacher. So, in a very real sense, you are having a relationship with your teacher—that is, a student–teacher relationship. Roles prescribe how people should behave. Most of the people with whom you interact are related to you via your role as student. The reason you interact with so many professors is because you are a student. What you interact about—that is, the topic of your interaction—is also defined by your role as student; you and your professors interact about courses. How you interact with your professor—that is, the style of talk (e.g., polite language)—is also prescribed by your role as student. The language and style of your talk with your professor is probably very different from the language and style of talk you use when you go back to your dorm room and interact with your friends. Probably the 10 people with whom you most recently interacted were directly related to you via your role as student. When you go back to your hometown during semester break and step into the role of son/daughter or brother/sister, you are assuming a different role, and your interaction changes accordingly. Your interaction varies as a function of what role you are assuming.

Roles vary from culture to culture. Although in just about every culture there are student and teacher role relationships, how those roles are defined varies significantly. What it means to be a student in the United States is very different from what it means in Japan. In Japan, for example, many students go to school 6 days a week. Japanese teachers are highly respected and play an influential role in the Japanese student’s life. What it means to be a mother or father also varies considerably from one culture to another. In the Masai culture of Kenya, a woman is defined by her fertility. To be defined as a mother in Masai culture, a woman must endure circumcision (i.e., clitoridectomy), an arranged marriage, and wife beating. Conceptually, people (i.e., perceptual contexts) are connected to one another via their relationships. The model shows this connection via the sociorelational context (see Figure 1.6). The sociorelational context links the two perceptual contexts. One’s roles prescribe the types of verbal and nonverbal symbols that are exchanged. In this book, the sociorelational context and role relationships are the focus of Chapter 6.
All our relationships are defined by the verbal and nonverbal messages we send to our relational partners. What differentiates one relationship from another is the verbal and nonverbal things we do with each other. For example, what differentiates your relationship with your teacher from your relationship with your best friend is the verbal and nonverbal things you do with each other. Notice that in the contextual model, the sociorelational context is graphically represented by two circles labeled nonverbal and verbal code (see Figure 1.6). Again, the verbal and nonverbal messages define the relationship, and the relationship connects the perceptual contexts.

The nonverbal circle is the larger of the two and is represented by a continuous line. The verbal circle is smaller and is represented as a series of dashes in the shape of a circle. The nonverbal message circle is larger than the verbal message circle because the majority of our communicative behavior is nonverbal. Whether we are using words or not, we are communicating nonverbally through eye contact, body stance, and space. In addition, our nonverbal behavior is ongoing; we cannot not behave. The verbal message circle is formed by a series of dashes to represent the digital quality of verbal communication. By digital, we mean that, unlike our nonverbal communication, our verbal communication is made up of words that have recognizable and discrete beginning and ending points. A word is like a digit. We can start and stop talking with words. However, our nonverbal behavior goes on continuously. Chapter 7 concentrates on verbal communication codes, and Chapter 8 addresses nonverbal codes.

The general theme of this book, as represented in the model, is that intercultural communication is defined by the interdependence of these various contexts. The perceptual contexts combine to create the sociorelational context, which is defined by the verbal and nonverbal messages sent. The sociorelational context is influenced by the environmental context and defined by the microcultural and cultural contexts. These contexts combine in a complex formula to create the phenomenon of intercultural communication.

Intercultural Communication and Uncertainty

When we interact with someone from a different culture, we are faced with a lot of uncertainty. We may not know anything about the person’s culture, values, habits, behavior, dress, and so on. We may not know what to say or do in such circumstances. This uncertainty about the other person may make us feel nervous and anxious. The late Charles Berger, well known communication theorist contends that the task of interacting with someone from a different culture who may look, act, and communicate differently presents the intercultural communicator with some complex predictive and explanatory problems. To some extent, to effectively interact with someone from a different culture, we must be able to predict how our interaction partner is likely to behave and, based on those predictions, select our appropriate verbal and nonverbal messages.

Berger theorizes that whenever we come together and interact with a stranger, our primary concern is to reduce uncertainty, especially when the other person is someone with whom we will interact again. Often, when we are faced with high levels of uncertainty, we experience anxiety. In high-uncertainty situations, our primary goal is to reduce uncertainty and increase the predictability of the other. This can be accomplished via specific verbal and nonverbal communication strategies such as question asking and appropriate nonverbal expressiveness. Initial interaction with someone, or interacting with someone from a different culture, may produce heightened anxiety.
Intercultural communication experts William Gudykunst and Young Kim have argued that when we interact with people from different cultures, we tend to view them as strangers. Strangers are unknown people who are members of different groups. Anyone entering a relatively unknown or unfamiliar environment falls under the rubric of “stranger.” Interaction with people from different cultures tends to involve the highest degree of “strangerness” and the lowest degree of familiarity. Thus, there is greater uncertainty in initial interaction with strangers than with people with whom we are familiar. According to Gudykunst and Kim, actual or anticipated interaction with members of different groups (e.g., cultures or ethnic groups different from our own) leads to anxiety.\(^{28}\) If we are too anxious about interacting with strangers, we tend to avoid them. Communication researchers Jim Neuliep and Jim McCroskey state that this type of communication anxiety can be labeled *intercultural communication apprehension*—that is, the fear or anxiety associated with either real or anticipated interaction with people from different groups, especially different cultural or ethnic groups.\(^{29}\)

**Intercultural Communication Apprehension**

Successfully interacting with someone from a different culture requires a degree of communication competence. According to Brian Spitzberg, most models of communication competence include cognitive, affective, and behavioral components. The cognitive component refers to how much one knows about communication. The affective component includes one’s motivation to approach or avoid communication. The behavioral component refers to the skills one has to interact competently. An interculturally competent communicator is *motivated* to communicate, *knowledgeable* about how to communicate, and *skilled* in communicating. In addition, an interculturally competent communicator is *sensitive* to the expectations of the context in which communication occurs. Competent communicators interact effectively by adapting messages appropriately to the context. Competent communicators understand the rules, norms, and expectations of the relationship and do not significantly violate them. Communicators are effective to the degree that their goals are accomplished successfully.\(^{30}\)

According to Neuliep and McCroskey, a person’s affective orientation toward intercultural communication involves the individual’s degree of motivation to approach or avoid a given intercultural context or person. Communication studies indicate that at least 20% of the U.S. adult population experience high levels of fear or anxiety even when communicating with members of their own culture. Other studies indicate that 99% of U.S. citizens experience communication apprehension at some time in their lives, perhaps during a job interview, a first date, and so on. One outcome of communication apprehension is to avoid communication. When people feel anxious about communicating with others, they tend to avoid such situations.

Given that intercultural communication may be more anxiety producing than other forms of communication, the number of people suffering from intercultural communication apprehension is likely considerable. Identifying such individuals may be the first step toward more effective and successful intercultural communication. Self-Assessment 1.2 is an instrument called the Personal Report of Intercultural Communication Apprehension (PRICA). This scale was developed by communication researchers Neuliep and McCroskey. PRICA is similar to the Personal Report of Communication Apprehension (PRCA-24) you completed earlier in this chapter. The difference between these two scales...
is that PRICA assesses your degree of apprehension about communicating with someone from a culture different from yours. After completing each scale, you can compare your scores from both instruments.

**SELF-ASSESSMENT 1.2**

**PERSONAL REPORT OF INTERCULTURAL COMMUNICATION APPREHENSION**

**Directions:** This instrument is composed of 14 statements concerning your feelings about communicating with people from other cultures. Please indicate in the space provided the degree to which each statement applies to you by marking whether you (1) strongly agree, (2) agree, (3) are undecided, (4) disagree, or (5) strongly disagree with each statement. There are no right or wrong answers. Work quickly, and record your first impressions.

1. Generally, I am comfortable interacting with a group of people from different cultures.
2. I am tense and nervous while interacting in group discussions with people from different cultures.
3. I like to get involved in group discussions with others who are from different cultures.
4. Engaging in a group discussion with people from different cultures makes me tense and nervous.
5. I am calm and relaxed when interacting with a group of people who are from different cultures.
6. While participating in a conversation with a person from a different culture, I feel very nervous.
7. I have no fear of speaking up in a conversation with a person from a different culture.
8. Ordinarily, I am very tense and nervous in conversations with a person from a different culture.
9. Ordinarily, I am very calm and relaxed in conversations with a person from a different culture.
10. While conversing with a person from a different culture, I feel very relaxed.
11. I’m afraid to speak up in conversations with a person from a different culture.
12. I face the prospect of interacting with people from different cultures with confidence.
13. My thoughts become confused and jumbled when interacting with people from different cultures.
14. Communicating with people from different cultures makes me feel uncomfortable.

**Scoring:** To score the instrument, reverse your original response for Items 2, 4, 6, 8, 11, 13, and 14. For example, for each of these items 1 = 5, 2 = 4, 3 = 3, 4 = 2, and 5 = 1. If your original score for Item 2 was 1, change it to a 5. If your original score for Item 4 was a 2, change it to a 4, and so on. After reversing the score for these seven items, sum all 14 items. Scores cannot be higher than 70 or lower than 14. Higher scores (e.g., 50–70) indicate high intercultural communication apprehension. Lower scores (e.g., 14–28) indicate low intercultural communication apprehension.

The PRICA instrument is composed of 14 statements concerning your feelings about communication with people from other cultures. Please indicate in the space provided the degree to which each statement applies to you by marking whether you (1) strongly agree, agree, (3) are undecided, (4) disagree, or (5) strongly disagree with each statement. There are no right or wrong answers, and many of the statements are designed to be similar to other statements. Do not be concerned about this. Work quickly and record your first impressions. Responding to these statements as honestly as possible is very important; otherwise, your score will not be valid.

To the degree that you answered the items honestly, your score is a fairly reliable and valid assessment of your motivation to approach or avoid intercultural communication. Spitzberg argues that as your motivation increases, so does your confidence. As confidence increases, intercultural communication competence also is likely to increase. People who are nervous and tense about interacting with people from different cultures are less likely to approach intercultural communication situations and probably are not confident about encountering new people from different cultures.

FUNDAMENTAL ASSUMPTIONS ABOUT INTERCULTURAL COMMUNICATION

A central premise of this book is that intercultural communication is a complex combination of the cultural, microcultural, environmental, perceptual, and sociorelational contexts between two people who are encoding and decoding verbal and nonverbal messages. Because of the complexity of this process, a fundamental assumption about intercultural communication is that during intercultural communication the message sent is usually not the message received.

**Assumption #1.** During intercultural communication, the message sent is usually not the message received. Whenever people from different cultures come together and exchange messages, they bring with them a whole host of thoughts, values, emotions, and behaviors that were planted and cultivated by culture. As we have said, intercultural communication is a symbolic activity in which the thoughts and ideas of one person are encoded into a verbal or nonverbal message format and then transmitted through some channel to another person who must decode it, interpret it, and respond to it. This process of encoding, decoding, and interpreting is filled with cultural noise. Noted intercultural communication scholar Gudykunst has asserted that during intercultural communication culture acts as a filter through which all messages, both verbal and nonverbal, must pass. To this extent, all intercultural exchanges are necessarily, to a greater or lesser extent, charged with ethnocentrism. Hence, during intercultural communication, the message sent is not the message received.

**Ethnocentrism** refers to the idea that one’s own culture is the center of everything and all other groups (or cultures) are scaled and rated with reference to it. Sociologist W. G. Sumner argued that ethnocentrism nourishes a group’s pride and vanity while looking on outsiders, or out-groups, with contempt. Although culture may mediate the extent to which we experience ethnocentrism, it is thought to be universal. One of the effects of ethnocentrism is that it clouds our perception of others. We have a tendency to judge
Neuliep and McCroskey have argued that the concept of ethnocentrism is essentially descriptive and not necessarily pejorative. Ethnocentrism may serve a valuable function when one’s in-group is under attack or threatened. Moreover, ethnocentrism forms the basis for patriotism, group loyalty, and the willingness to sacrifice for one’s own group. To be sure, however, ethnocentrism can be problematic. In not looking past their own culture, people see little importance in understanding other cultures. At high levels, ethnocentrism is an obstacle to effective intercultural communication.

Neuliep and McCroskey have developed the **GENE (Generalized Ethnocentrism) Scale**, which is designed to measure ethnocentrism. This scale and the directions for completing it are presented in Self-Assessment 1.3.

**Assumption #2. Intercultural communication is primarily a nonverbal act between people.** Some foreign language teachers might have us believe that competency in a foreign language is tantamount to effective and successful intercultural communication in the culture that speaks that language. To be sure, proficiency in a foreign language expedites the intercultural communication experience, but intercultural communication is primarily and fundamentally a nonverbal process. The expression of intimacy, power, and status among communicators is typically accomplished nonverbally through paralinguistic cues, proxemics, haptics, oculesics, and olfactics. In Korea, for example, one’s hierarchical position is displayed via vocal tone and pitch. When a subordinate is offered an important piece of paper, such as a graded exam from a respected professor, he or she grasps it with both hands (not just one) and accompanies this action with a slight nod of the head and indirect eye contact—all nonverbal signs of deference.

The well-known anthropologist Hall has argued that people from different cultures live in different sensory worlds. Hall claims that people from different cultures engage in a selective screening of sensory information that ultimately leads to different perceptions of experience. Regarding olfactics (smell), most cultures establish norms for acceptable and unacceptable scents associated with the human body. When people fail to fit into the realm of olfactic cultural acceptability, their odor alerts others that something is wrong with their physical, emotional, or mental health. In the United States, we are obsessed with masking certain smells, especially those of the human body. In Western and Westernized cultures, body odor is regarded as unpleasant and distasteful, and great effort is expended in its removal. As we will see in Chapter 8, our nonverbal messages complement, augment, accent, substitute for, and repeat our verbal messages.

### SELF-ASSESSMENT 1.3

**GENE (GENERALIZED ETHNOCENTRISM) SCALE**

**Directions:** The GENE Scale is composed of 22 statements concerning your feelings about your culture and other cultures. In the space provided to the left of each item, indicate the degree to which you agree or disagree with the statement.

(Continued)
which the statement applies to you by marking whether you (5) strongly agree, (4) agree, (3) are neutral, (2) disagree, or (1) strongly disagree with the statement. There are no right or wrong answers. Some of the statements are similar. Remember, everyone experiences some degree of ethnocentrism. Fortunately, as we will see in Chapter 5, ethnocentrism can be managed and reduced. Be honest! Work quickly and record your first response.

1. Most other cultures are backward compared to my culture.
2. My culture should be the role model for other cultures.
3. People from other cultures act strange when they come into my culture.
4. Lifestyles in other cultures are just as valid as those in my culture.
5. Other cultures should try to be more like my culture.
6. I’m not interested in the values and customs of other cultures.
7. People in my culture could learn a lot from people of other cultures.
8. Most people from other cultures just don’t know what’s good for them.
9. I respect the values and customs of other cultures.
10. Other cultures are smart to look up to our culture.
11. Most people would be happier if they lived like people in my culture.
12. I have many friends from other cultures.

13. People in my culture have just about the best lifestyles of anywhere.
14. Lifestyles in other cultures are not as valid as those in my culture.
15. I’m very interested in the values and customs of other cultures.
16. I apply my values when judging people who are different.
17. I see people who are similar to me as virtuous.
18. I do not cooperate with people who are different.
19. Most people in my culture just don’t know what is good for them.
20. I do not trust people who are different.
21. I dislike interacting with people from different cultures.
22. I have little respect for the values and customs of other cultures.

**Scoring:** To determine your ethnocentrism score, complete the following steps: Step 1: Add your responses to Items 4, 7, and 9.

Step 2: Add your responses to Items 1, 2, 5, 8, 10, 11, 13, 14, 18, 20, 21, and 22 (note that not all items are used in scoring).

Step 3: Subtract the sum from Step 1 from 18 (i.e., 18 minus Step 1 sum).

Step 4: Add the results of Step 2 and Step 3. This sum is your generalized ethnocentrism score. Higher scores indicate higher ethnocentrism. Scores above 55 are considered high ethnocentrism.

Assumption #3. **Intercultural communication necessarily involves a clash of communicator style.** In the United States, talk is a highly valued commodity. People are routinely evaluated by their speech. Yet silence—that is, knowing when not to speak—is a fundamental prerequisite for linguistic and cultural competence. The use and interpretation of silence varies dramatically across cultures. In many collectivistic cultures, such as Japan and Korea, silence can carry more meaning than words, especially in the maintenance of intimate relationships. In fact, the Japanese and some Native American/American Indian tribes in the United States believe that the expression of relational intimacy is best accomplished nonverbally. They believe that having to put one’s thoughts and emotions into words somehow cheapens and discounts them.

In the United States, we value, and employ, a direct and personal style of verbal communication. Personal pronouns are an essential ingredient in the composition of just about any utterance. Our mottos include “Get to the point,” “Don’t beat around the bush,” “Tell it like it is,” and “Speak your mind.” Many cultures, however, prefer an indirect and impersonal communication style. In these cultures, there is no need to articulate every message. True understanding is implicit, coming not from words but from actions in the environment, where speakers provide only hints or insinuations. The Chinese say, “One should use the eyes and ears, not the mouth,” and “Disaster emanates from careless talk.” The Chinese consider the wisest and most trustworthy person to be the one who listens, watches, and restricts his or her verbal communication.

Assumption #4. **Initial intercultural communication is a group phenomenon experienced by individuals.** Whenever we interact with a person from a different culture, especially early in our relationship with him or her, we carry with us assumptions and impressions of that other person. The specific verbal and nonverbal messages we exchange are usually tailored for the person based on those assumptions and impressions. Often, these are based on characteristics of the other person by virtue of his or her membership in groups related to culture, race, sex, age, or occupation, for example. In other words, we have a tendency to see others not as individuals with unique thoughts, ideas, and goals, but rather as “an Asian American” or “a woman” or “an old person” or “a cab driver.” In other words, we do not see the person—we see the groups to which the person belongs. The problem with this is that group data may not be a reliable source on which to construct our messages. Because someone belongs to a specific racial, ethnic, sex, or age group does not necessarily mean that he or she takes on the thoughts, behaviors, and attitudes associated with that group. Thus, the potential for miscommunication is great. So during initial intercultural communication, we have to be mindful that while the person with whom we are interacting is from a different cultural group, he or she is also an individual. Once we further develop a relationship with that person, we will start to see the relationship as interpersonal rather than intercultural. We will discuss this more in Chapter 9.

Assumption #5. **Intercultural communication is a cycle of stress, adaptation, and growth.** As mentioned earlier in this chapter, when we come together with a person from a different culture we may feel uncertain, apprehensive, and anxious. Such feelings are stressful. Hence, sometimes intercultural communication is stressful. The good news is that we can learn and adapt to such stress and eventually grow. During intercultural communication, we have to be mindful that the communication strategies we use with persons with whom
we are familiar may not be effective with persons from other cultures. Thus, we have to learn to adapt and adjust our communication style. We have to recognize that we will make mistakes, learn from them, adapt, and move on. From these experiences, we grow as humans. A good beginning point is to recognize that people from different cultures are different—not better or worse, but simply different. Once we are able to do this, we can adjust and adapt our verbal and nonverbal messages accordingly and become competent interactants.39

THE ETHICS OF INTERCULTURAL COMMUNICATION

A recurring theme throughout this book is ethics. Ethics involve judgments about what is right and wrong in the course of human conduct. Ethics set a standard by which judgments of right and wrong are decided. Although some scholars distinguish between ethics and morals, we will treat the two terms interchangeably. Ethics become salient (i.e., particularly relevant) whenever human behavior and decision-making are conscious, voluntary, and impact others. Ethics should not be confused with, nor are they necessarily linked to, religion. While most religions profess and advocate strict ethical standards, ethics apply to nonreligious people as well as religious people. One need not be religious to act ethically. Moreover, ethics are not synonymous with whatever is legal. While legal codes integrate ethical standards into laws that guide and control the behavior of citizens, they may not necessarily be ethical. For example, slavery was legal in the United States for more than a hundred years.40

If we define culture as an accumulated pattern of values, beliefs, and behaviors held by an identifiable group of people, and if we assume that cultures are different from one another, then intercultural communication takes on a necessary ethical dynamic because communication is a conscious, voluntary act that influences others. Consider the following situation.

AN INTERCULTURAL CONVERSATION
WHERE SHOULD WE EAT DINNER?

Tommy is from the Chicago suburbs. He is studying abroad in Seoul, South Korea. His host-national friend, Kwan, is a native South Korean student and is serving as his mentor. They are joined by another fellow student, Dinesh, their friend from India.

Tommy: Hey, guys, I’m starved. Where should we eat dinner?

Kwan: I know a great place not far from here where they serve bosintang. You guys should try it.

Tommy: Bosintang? What’s that?

Kwan: It’s dog meat soup. A lot of people eat it in the summer.

Tommy: Seriously?
The Intercultural Conversation is a simple example of the ethics involved in communicating with people from different cultures. Although we may not think about it much, people express and create meaning through the shared food they eat. In any culture, food serves a communicative function. Many important cultural and social rituals are conducted around and with food. In the United States, for example, Thanksgiving is a food-centered holiday. Meals are a central feature of birthday parties, weddings, and funerals. First dates often occur in restaurants. Sporting events (e.g., the Super Bowl) are regularly thought of as much as eating events as sporting ones. In her research on the food and eating habits in South Asian cultures, Jennifer B. Saunders observes that in many, the preparation, serving, and consumption of food are often enacted in heightened contexts that create symbolic meanings for both the performers and the audience. Saunders maintains that in Indian culture, the substance and symbol of the food one eats are clearly defined. She notes that the act of eating reveals participants’ ethics and character. Each bite of food, she argues, communicates how that person understands himself or herself and how the food will contribute to his or her moral and emotional state.41

In 2018, on average, a U.S. citizen ate 222 pounds of beef. U.S. citizens like to eat beef. On the other hand, many Hindus regard cows as sacred and abstain from eating beef. And while U.S. citizens enjoy eating beef, most are disgusted by the thought of eating a horse, dog, or cat. Yet in parts of South Korea, people still eat dog. Writing for USA Today, George Petras notes that South Koreans eat more than 1 million dogs each year. Approximately 2.5 million dogs are raised in South Korean dog farms each year and about 1 million are killed and eaten. Petras is careful to point out that the majority of South Koreans do not eat dog; that 48% of South Koreans have never eaten dog, 39% have, but do not currently eat dog, and that 13% eat dog. Those who currently eat dog meat believe it revives energy. Dog meat is served in a meat soup, or what is called bosintang.42
So Tommy, Kwan, and Dinesh are faced with an ethical dilemma within the social/communicative ritual of eating a meal. All three young men have their own cultural ethics guiding their eating habits. Kwan wants Tommy and Dinesh to eat dog meat soup. Neither wants to eat it. Dinesh wants to eat vegetarian. Tommy admits that if they were in his native culture, he would try to sway them to eat beef. Who is right?

Five Approaches to Determining Which Behaviors Are Ethical

A central question about intercultural ethics is whether the same ethical principles apply to all cultures, a concept sometimes referred to as metaethics, or whether unique ethical standards apply to each culture individually, sometimes referred to as cultural relativism. There is no easy answer to this question.

For example, if we argue from a culturally relativistic perspective, then we must be willing to tolerate behaviors that many of us would find cruel, such as dowry deaths. In India, marriages are often arranged between the parents of the future bride and groom. In most marital arrangements, the bride’s family is required to pay a dowry—that is, a gift of some sort or financial grant to be paid to the groom’s family. If the bride’s family cannot meet the dowry arrangements, or if the groom’s family sees the given dowry as unacceptable, the young women often are either murdered or driven to suicide by continuous harassment and torture by husbands and in-laws in an effort to coerce an increased dowry. According to India’s National Crime Records Bureau, 7,634 women died in 2015—20 every day—due to dowry harassment. Legislation outlawing dowries in India was enacted in 1961, but such laws are typically ignored. The point here is that few persons would condone the practice of dowry deaths. There is likely not a single anthropologist who, after immersing himself or herself in Indian culture, would come away and justify or excuse such a custom under the guise of cultural relativism.43

On the other hand, are there universal standards that everyone on the planet must obey? And who decides on these standards? Historically, scholars from across a variety of academic fields have recognized five approaches to determining which behaviors are ethical: the utilitarian approach, the rights approach, the fairness or social justice approach, the common good approach, and the virtues approach.44

The Utilitarian Approach

The utilitarian approach, sometimes called utilitarianism, posits that ethical actions are those that provide the greatest balance of good over evil. Some act is deemed ethical if it provides the greatest good for the greatest number (of people). To apply such an approach, one must first identify the courses of action available, determine who is affected by such actions in terms of who benefits or who is harmed, and then select the action that produces the greatest benefit and least harm. This approach is called utilitarianism because it emphasizes the consequences of actions on the well-being—that is, the utility—of all persons directly or indirectly benefiting from or harmed by the act.45

The Rights Approach

The rights approach focuses on an individual’s right to choose for herself or himself. Advocates of a rights approach maintain that humans are distinct from other living
beings on the planet because they have the free will to choose their course of action and that such free will leads to dignity. Moreover, humans have a basic moral right to have their free choices respected, and it is a violation of human dignity to use people (e.g., hurt, manipulate) in ways they do not freely choose. Other fundamental human rights include the right to the truth, the right to privacy, the right not to be injured, and the right to what is agreed on. From this perspective, all humans have the right to be respected and treated as free, rational, and capable of making their own decisions. Thus, in this view, acts are ethical to the extent that they respect the rights of others. Acts are wrong to the extent that they violate the rights of others.46

The Fairness or Social Justice Approach
The fairness or social justice approach is based on the Aristotelian dictum that “equals should be treated equally and unequals unequally.” In this case, the ethical question is whether an act treats everyone in the same way or whether it shows favoritism and/or discrimination—that is, treats some unequally. Advocates of this approach maintain that favoritism benefits some people without a justifiable reason. Discrimination burdens people who should be treated equally. Hence, an act that shows favoritism and/or discrimination is unethical. This approach requires that people be treated with consistency.47

The Common Good Approach
The common good approach is based on the idea that community life is, in and of itself, good and that people within the community and their subsequent actions should contribute to the community good. This approach has a more societal orientation than does utilitarianism in that it emphasizes that one’s actions affect everyone’s welfare, including a society’s system of just laws, public safety, affordable health care, an effective education system, a clean environment, and even public recreation areas. Thus, an ethical act is one that ensures that such social policies are not violated, especially those that may inordinately affect vulnerable members of the society. This approach differs from the rights approach in that, while respecting and championing the rights of societal members to follow their individual goals, the common good approach also challenges societal members to recognize and advance the goals shared by the community.48

The Virtues Approach
The virtues approach asserts the idea that there are certain ideals, principles, or standards (i.e., virtues) toward which every individual should strive to reach his or her highest potential. Individuals realize such virtues through conscious reflection on what kinds of people they have the potential to become. Virtues such as truth, beauty, honesty, courage, compassion, generosity, tolerance, love, fidelity, integrity, fairness, self-control, and prudence are encouraged. Actions manifested in such virtues are considered ethical. In dealing with an ethical problem using the virtue approach, individuals should ask themselves, “What kind of person should I be? What will promote the development of character within me and my community?”49
Ethical Principles of Eastern Cultures

Although the five approaches to ethics listed previously are applicable to a large group of people and an array of different cultures, all of them have their roots in Western ideology and philosophy and may not be applicable to all cultures. To be sure, Robert Shuter asserts that many of the fundamental tenets of the five approaches are, in fact, not a part of the ethics that guide many Eastern cultures.50 For example, Shuter states that implicit in most of these classical approaches is the tenet that human acts are considered ethical to the extent that they contribute to the happiness and general well-being of the individual—that truthfulness, equality, choice, and fairness are paramount in defining an ethical act. Moreover, Shuter argues that these perspectives place the free will of the individual at the center of ethics, above all else. Such focus assumes that humans are naturally reasonable and intellectual. But as Shuter points out, the ethical principles of some major Eastern ethical codes do not follow the same assumptions. Two traditions, including Confucianism and Hinduism, have very different perspectives on what is ethical.

Confucianism

Confucianism prescribes an ethical and philosophical scheme of living developed from the writings of Confucius. Cultures and countries strongly influenced by Confucianism include China, Korea, Japan, Taiwan, and Vietnam. Unlike many of the Western approaches to ethics that stress free choice and equality, Confucianism prescribes a set of rituals and conventional social habits to guide humans to appropriate and ethical acts. The wisest of humans is competent at ritual and practicing ritual in all circumstances. By definition, rituals restrict, rather than free, human action. In addition, where many of the Western approaches elevate humans above all else, Confucianism prescribes social rituals designed so that the natural world, social institutions, and humans all flourish interdependently.51

In Confucianism, there are five basic virtues: ren (benevolence/altruism), yi (integrity/sense of rightness), li (rite and propriety), chi (moral understanding), and shin (trust).52 Within these five virtues is the recurring theme that humans are defined by their obedience to their place in the social hierarchy of relationships. By definition, social hierarchies rank order people and prescribe rules for proper conduct within each level of the hierarchy. In Confucianism, the five principal relationships are (1) ruler and subject, (2) parent and child, husband and wife, (4) older sibling and younger sibling, and (5) friend and friend. Peace and harmony can be achieved only if people know, understand, and practice their proper place in society.53 Some scholars maintain that Confucianism fosters inequality. Yeanmi You states that Confucianism has fostered gender biases by promoting the belief that a son is preferred over a daughter and a man is inherently superior to a woman in society. A woman who is as talented and educated as a man faces great discrimination in society because of the portrayal of a man as superior to a woman, which is deeply rooted in Confucianism.54

Hinduism

Hinduism is the third-largest religion after Christianity and Islam, with more than 1 billion followers. Hinduism is not monotheistic (i.e., purporting belief in a single god).
Hindus believe that gods or divinities can take many forms, but all form one universal spirit called Brahman. The three most important representations of Brahman are Brahma, the creator of the universe; Vishnu, the preserver or protector of the universe; and Shiva, the destroyer of the universe. Therefore, they are polytheistic.

Hinduism is practice based rather than faith based, which means that practices—which are often social—are more important than beliefs. Jeff Spinner-Halev writes this:

Hinduism is concerned with legitimizing hierarchical social relationships and mollifying deities, not with faith or belief. A Hindu may be a theist, pantheist, atheist, communist and believe whatever he likes, but what makes him into a Hindu are the ritual practices he performs and the rules to which he adheres, in short, what he does.55

Hindus believe in the reincarnation of the soul, which is rebirth after death. One’s physical body is mortal, but one’s soul is immortal. Hindus believe that when they die, their soul enters a new body and the cycle continues. They also believe the conditions of one’s present life are due to Karma, or the accumulated good or bad behaviors and deeds one commits in past lives. A practicing Hindu can improve his or her conditions through good behavior and creates suffering through bad behavior. Eventually, the soul will achieve Moksha, or salvation, and stop the cycle of rebirths to become a part of the absolute soul. The four main objectives or aims of life include Dharma, or righteousness; Artha, or wealth; Kama, or desire; and Moksha, or salvation.

Hinduism practices a social-ordering hierarchical system (i.e., a caste) in which people are ranked. Hinduism prescribes strict rules and regulations about how one is to act within one’s caste level. In some cases, the lower caste may not be allowed even to interact with the higher caste. In India’s caste system, there are four levels: (1) Brahmins—the learned, educated elites, and priests; (2) Kshatriyas—the nobles and warriors; (3) Vaishyas—the traders, businessmen, and farmers; and (4) Sudras—those who serve the needs of the upper-caste members. The Sudras are further divided into the touchables and untouchables. The touchables take on positions considered demeaning and polluting by the upper caste, such as barbers, hairdressers, or cleaners. The untouchable Sudras are considered spiritually polluting and perform jobs such as garbage collecting. Hinduism prescribes that one is born into a caste level, and it is virtually impossible to move from one caste level to the next—that is, from lower to higher levels. In traditional Hindu society, men and women are clearly not equal. The birth of a son is seen as a blessing, while the birth of a daughter is met with misgivings—she is a financial burden to the family.56

So we can see from the Intercultural Conversation box in this section that Tommy, Kwan, and Dinesh have themselves an ethical dilemma. The answer to where they will lunch is not an easy one since each comes from a very different set of ethical standards.

THE GOAL: INTERCULTURAL COMMUNICATION COMPETENCE

The fundamental goal of this book is to help you become a competent intercultural communicator. Intercultural communication competence is defined as the degree to which you
effectively adapt your verbal and nonverbal messages to the appropriate cultural context. When you communicate with someone from a different culture, to be interculturally competent you will have to adjust and modify the kinds of verbal and nonverbal messages you send. This process requires that you have some knowledge about the person’s culture with whom you are communicating, that you are motivated to communicate with him or her, and that you have the appropriate verbal and nonverbal skills to encode and decode messages.

Interculturally competent people successfully and effectively adapt their verbal and nonverbal messages to the appropriate cultural context. Intercultural competence varies from situation to situation. That is, a particular American may be quite competent while interacting with Chinese people and relatively incompetent when interacting with Germans. Verbal and nonverbal appropriateness and effectiveness are two important qualities of intercultural competence. According to Brian Spitzberg, appropriate behaviors conform to the rules, norms, and expectancies of the cultural context. For example, when greeting a Japanese person in Japan, one is expected to bow. The rules associated with bowing are determined by one’s status (e.g., age, sex, occupation, education). The person of lower status bows lower and longer than the person with higher status and typically does not make direct eye contact. Effective behaviors are those that successfully perform and accomplish the rules and norms. For example, to the extent you are able to bow correctly, your behavior will be perceived as effective and competent. As we have seen throughout this book, the appropriateness and effectiveness of verbal and nonverbal messages vary considerably across cultures. Behaviors considered appropriate in one culture may not be appropriate in another culture.

An Integrated Model and Measure of Intercultural Communication Competence

For the past 10 years or so, Lily Arasaratnam and her colleagues have been developing an integrated model and measure of intercultural communication competence. Like others, Arasaratnam maintains that being a competent intercultural communicator involves knowing about other cultures, having an approach tendency, and applying appropriate and effective communication behaviors. Arasaratnam believes that effective and appropriate behavior can be best judged and determined from the perspectives of both the communicator enacting the behavior and the other person with whom intercultural communication occurs. Moreover, Arasaratnam contends that a person who is competent in one type of intercultural exchange probably possesses characteristics that enable him or her to communicate competently in other intercultural exchanges as well.

In related research, Arasaratnam and Marya Doerfel discovered that those who were identified as competent intercultural communicators possessed five qualities in common: (a) empathy, (b) intercultural experience/training, (c) approach tendencies, (d) a global attitude, and (e) listening skills. Arasaratnam and Doerfel arrived at these five characteristics via interviews with persons from 15 different countries who were asked to describe a competent intercultural communicator. Arasaratnam and Doerfel interviewed persons from the United States, Bahamas, Bosnia and Herzegovina, Burkina Faso, China, Egypt, Ghana, India, Indonesia, Ivory Coast, Japan, Malaysia, Nigeria, Norway, and the Philippines. Specifically, they wanted to identify those traits in competent intercultural interactants that transcend the cultural context and cultural identity.
STUDENT VOICES ACROSS CULTURES

STEPPING INTO A DIFFERENT CULTURE

I quickly learned that in Italy, lines often do not exist. This crowd of people was a swarm of other patrons also attempting to get their morning coffee fix, and there was no systematic way for me to get to the front. This situation gave me severe anxiety. Italians were entering this café and would force their way through the others congregated around the counter. They proceeded to yell what they wanted to the owner, Marco, while hovering nearby, loudly conversing with other patrons while they waited for their daily espresso. In the United States, we wait in lines so regularly that it is something we no longer think about. We like organization, and lines are an integral part of this systematic and predictable process, especially when ordering something to eat.

The disorder at the café caused me confusion and stress. The act of getting coffee, something that was so simple for me to do in America, was proving to be very difficult in Italy. Over time, as I frequented this little café, I adapted my communication strategies to match those used by Italians. If I wanted something to drink or eat, I had to be persistent and sometimes tough—at least from an American standpoint. By the end of my stay in Florence, this unwavering attitude became inherent in my actions and communication; it allowed me to be a competent intercultural communicator.

Hanna Klecka

During my semester abroad in Italy, I discovered many similarities and differences between American and Italian culture. As I engaged in intercultural communication, I experienced various degrees of stress, adaptation, and acceptance of what it meant to be Italian.

From the start, I learned that everyday interactions, like ordering a cappuccino at a local bustling café, were very stressful experiences. When I wandered into Café Michelangelo for the first time one morning, I made the mistake of waiting in line behind a crowd of people.

Empathy, of course, involves the extent to which one can infer the cognitions and motivations of another. Complete empathy is probably impossible. Here, empathy also includes the ability to sense, accurately perceive, and appropriately respond to one’s personal, interpersonal, and social environment. Approach tendencies involve the individual’s interest in and effort to talk, understand, and extend help. This includes the anticipation of or actual engagement in intercultural communication. Intercultural experience and training involves the actual study of intercultural communication. Respondents in the study reported that taking a course in intercultural communication led to competence. Regarding the listening aspect, competent intercultural communicators are perceived as such because they are willing to spend time listening and learning, and they know
about cultural matters and are good at relating to different cultures. The global attitude dimension describes individuals who are open to others, are better at communicating, show interest in differences and are aware of them, and have a level of exposure to these differences that makes them able to discern them. For example, are they speaking from their own cultural perspective or trying to communicate in the other’s cultural mode or speaking in a cultural mode that is neutral or not specific to either culture? Based on these five characteristics, Arasaratnam developed a scale designed to measure one’s intercultural communication competence.62

SELF-ASSESSMENT 1.4
THE INTERCULTURAL COMMUNICATION COMPETENCE SCALE

Directions: The following items may or may not describe how you think, feel, and behave when interacting with people from different cultures. In the space to the left of each item, indicate the degree to which you (5) strongly agree, (4) agree, (3) are neutral, (2) disagree, or (1) strongly disagree with the statement. There are no right or wrong answers. It’s best to record your initial response and not think too much about it.

1. I often find it difficult to differentiate between similar cultures (e.g., Asians, Europeans, Africans, etc.).

2. I feel a sense of belonging to a group of people based on relationship [i.e., family, friends] instead of cultural identity [i.e., people from my culture, people from other cultures].

3. I find it easier to categorize people based on their cultural identity than their personality.

4. I often notice similarities in personality between people who belong to completely different cultures.

5. If I were to put people in groups, I would group them by their culture rather than by their personality.

6. I feel that people from other cultures have many valuable things to teach me.

7. I feel more comfortable with people from my own culture than with people from other cultures.

8. I feel closer to people with whom I have a good relationship, regardless of whether they belong to my culture or not.

9. I usually feel closer to people who are from my own culture because I can relate to them better.

10. I feel more comfortable with people who are open to people from other cultures than with people who are not.

11. Most of my close friends are from other cultures.

12. I usually change the way I communicate depending on whom I am communicating with.

13. When I interact with someone from a different culture, I usually try to adopt some of his or her ways.

14. Most of my friends are from my own culture.

15. I usually look for opportunities to interact with people from other cultures.
Chapter 1  ■  The Necessity of Intercultural Communication

Scoring: Reverse your responses for Items 1, 2, 7, 8, 9, and 14. For these six items, if your original response was a 5, reverse it to a 1; if your original score was a 4, reverse it to a 2; if your original score was a 3, leave it a 3; if your original score was a 2, reverse it to a 4; and if your original score was a 1, reverse it to a 5. After reversing your scores for these items, sum all 15 items. Your score must range between 15 and 75. Higher scores (above 55) indicate more intercultural communication competence. Lower scores (below 35) indicate less intercultural communication competence.

Chapter Summary

The purpose of this chapter is to emphasize the necessity of intercultural communication and to define and clarify the terms communication, culture, and intercultural communication.

The first part of this chapter argued that recent technological, political, and sociological advancements have created a global village only dreamed about 30 years ago. The essential effect of this technology is its decentralizing role in disseminating information across local, regional, national, and international borders. This means that billions of people across the planet now have access to information not available to them only a few years ago. Information empowers people. While the dream of a global village holds great promise, the reality is that diverse people have diverse opinions, values, and beliefs that clash and too often result in violence. Although the challenges of an increasingly diverse world are great, the benefits are even greater. Communicating and establishing relationships with people from different cultures can lead to a whole host of benefits, including healthier communities; increased international, national, and local commerce; reduced conflict; and personal growth through increased tolerance. Only through intercultural communication can such conflict be managed and reduced.

The second part of this chapter offered some definitions of communication and culture. Both terms are difficult to define. Communication is a dynamic, intentional, interactive, transactive, contextual, and cultural process that involves the simultaneous encoding and decoding of verbal and nonverbal messages with someone else, within some relational context. Culture, in part, can be defined as an accumulated pattern of values, beliefs, and behaviors shared by an identifiable group of people with a common history and verbal and nonverbal symbol system. Intercultural communication is essentially contextual. The cultural, microcultural, and environmental contexts surround the communicators, whose sociorelational contexts are defined by the exchange of verbal and nonverbal messages encoded and decoded within each interactor’s perceptual context.

The third part of this chapter let you discover something about yourself—in this case, your intercultural communication apprehension. When we interact with someone from a different culture, we are faced with a lot of uncertainty. We may not know anything about the person’s culture, values, habits, behavior, dress, and so on. We may not know what to say or do in such circumstances. This uncertainty about the other person may cause us to feel nervous and anxious and may lead us to avoid such circumstances. Competent intercultural communicators are willing to approach intercultural situations and are sensitive to the differences in those situations. This part of the
The fourth part of this chapter took a look at ethics. Ethics become salient (i.e., particularly relevant) whenever human behavior and decision-making are conscious, voluntary, and impact others, such as during intercultural communication. Finally, the fifth part of this chapter introduced and outlined the goal of this book—that is, for you to become a competent intercultural communicator.

### Discussion Questions

1. In what ways is the United States changing demographically? What will the population look like in 50 years?
2. Why are so many people afraid of communication?
3. Why are so many people afraid to communicate with people from cultures different from their own?
4. Using the definition of culture presented in this chapter, how would you describe your culture?
5. How do the various contexts of the contextual model of intercultural communication relate to one another?
6. Why is it that during intercultural communication “the message sent is rarely the message received”?
7. What does it take to become an intercultural competent communicator?

### Developing Intercultural Communication Competence

Once again, one of the fundamental goals of this book is for you to become interculturally competent. In an effort to reach that goal, try to practice the following:

1. Although it may sound contradictory, one way to become more aware of cultural differences is to become mindful of your own behaviors. So the first step to becoming interculturally competent is to pay attention and note how your communicative behavior is driven by culture. For example, when you stand in line at the bookstore, are you consciously aware of the physical space between you and the other students? When you have a conversation with your friends at lunch are you consciously aware of your eye contact? The physical distance we assume while shopping and the eye contact we make during everyday conversations is very much driven by culture and differs considerably across cultures. So... Step 1, pay attention to your own behavior and keep in mind that what seems very natural to you is not natural to many others.
2. Take a moment and record your scores on the self-assessment instruments in this chapter:
   - PRICA: Personal Report of Intercultural Communication Apprehension
   - GENE: Generalized Ethnocentrism Scale
   - ICCS: Intercultural Communication Competence Scale

Do you see any patterns here? Were your scores high or low? Why might that be?
