Building and Energizing the Need for Change

You never want a serious crisis to go to waste.
—Rahm Emanuel, President Obama’s Former Chief of Staff and the Mayor of Chicago

CHAPTER OVERVIEW

This chapter asks the question, “Why change?”

• It develops a framework for understanding the need for change based on making sense of external and internal organizational data, and the change leaders’ personal concerns and perspectives.
• The chapter describes what makes organizations ready for change and provides a questionnaire to rate an organization’s readiness.
• It outlines how change leaders can create awareness for change.
• Finally, the chapter outlines the importance of the change vision and how change leaders can create a meaningful vision that energizes and focuses action.

In Chapter 2, we discussed the concept of unfreezing as a precondition to change. How can an organization and its people move to something new if their current mindset and response repertoire are not open to alternative paths and actions?
This situation above is straightforward. A crisis makes the need for change clear and dramatic. It demands an immediate response and the required action is understood—even more so if the institution has taken fire-safety planning seriously. Most people know the key actions: Where to exit? How to avoid panic? Who should be notified? Who should do the notifying?

However, in many situations, the need for change is vague and appropriate action is unclear. For example, even in an emergency, if there have been no “fires” for a considerable period but there have been false alarms, people may have become complacent, warning systems might be ignored or even have been deactivated due to improper maintenance, and emergency action plans forgotten. A parallel to this might explain the lack of action prior to the mortgage meltdown in the United States in 2007 and the contagion it caused in global financial markets. Some economists and financial experts had raised alarms as early as 2003\(^2\) (including the FBI in 2004\(^3\)) over flawed financial practices and regulations. However, their warnings about the need to regulate mortgage lenders were ignored. The prevailing perspective within the Bush administration was that regulations needed to be minimized because they got in the way of free markets and the generation of personal wealth. Before the meltdown, the need for change was evident to only a few people. In addition, powerful financial institutions and their executives had huge incentives to ignore such warnings and silence those in their own firms who were raising alarms. Self-interest, blind spots, and/or misguided views of the greater good can sometimes blind people to strengths, weaknesses, opportunities, and risks. It is a primary reason for the rise in the importance of risk management and the requirements around risk reporting that publically traded firms must comply with.\(^4\)

Past experiences may cause people to become not only complacent but also cynical about warnings. If false alarms have been regular occurrences, people will come to ignore them. If employees are told that there is a crisis when similar alerts in the past have proven to be false alarms, they will tend to discount the warning. If people are busy and they don’t want to be sidetracked, they won’t prepare for events that they think aren’t going to happen. Remember the press reports concerning the H1N1 flu pandemic in the summer and fall of 2009 and how they changed by the winter of 2010? In the fall, there was a sense of panic, with people lining up overnight to get inoculated. By February, journalists were writing that the World Health Organization (WHO) had overstated the threat, as they had with Bird Flu. As such reports multiply and become the fodder for watercooler and Internet conversations, will the public take WHO warnings as seriously next time?\(^5\) Concerns related to creating complacency may help to explain the careful way that WHO framed the warnings related to the outbreaks of Ebola in West Africa and the SARS-like virus in Saudi Arabia in 2013–2014.\(^6\)
When leaders are perceived to cry “wolf” too often, who will take them seriously when the threat comes to fruition? However, when risks manifest themselves into reality, the blaming always begins with whether or not warning signs were ignored. Such were the responses following both the Sandy Hook School Shooting, in Newtown, Connecticut, in December 2012, and the bombing at the Boston Marathon in April 2013. This, in turn, may lead us to treat symptoms rather than underlying causes, as we look for quick solutions and misinterpret correlations for causality. Even trained professionals can miss obvious cues, as in the story below.

A few years ago, my father was in intensive care, hooked to a heart monitor. Shortly after I arrived to visit him, the emergency alarm went off, but no one responded. I ran for help but was told not to worry—the alarm goes off all the time—just hit the reset button. The health care professionals had clearly adjusted their behavior to discount false alarms, but needless to say, I was left feeling anything but secure concerning the quality of the system designed to monitor the need for change in my dad’s treatment. What if it hadn’t been a false alarm? (G. Deszca)

Change agents need to demonstrate that the need for change is real and important. Only then will people unfreeze from past patterns. This is easier said than done. From 2008 through to the winter and spring of 2009, General Motors (GM) struggled to convince the United Auto Workers Union (UAW) that they needed significant financial concessions to survive. The UAW initially took the position that GM had signed a deal and should live up to it. However, the collapse of consumers’ demand for automobiles in the summer of 2008 led to fears of bankruptcy. Political pressure from the U.S. and Canadian governments on both GM and their employee unions in the United States (the UAW or United Auto Workers) and Canada (the CAW or Canadian Auto Workers) escalated in the wake of bailout requests. As a result of this pressure, the UAW abandoned its position that “We have done our share.” Concessions followed during the next nine months, covering everything from staffing levels, pay rates, and health care benefits to pensions. The CAW followed suit, shortly thereafter. When it comes to raising alarms concerning the need for change, it is sometimes tough to know when and how to get through to people. With GM, it took going to the edge of the precipice and beyond. They had to go bankrupt!

Many change-management programs fail because there is sustained confusion and disagreement over (a) why there is the need for change and (b) what needs changing. Ask organization members—from production workers to VPs—why their organization is not performing as well as it could and opinions abound and differ. Even well-informed opinions are often fragmentary and contradictory. Individuals’ perspectives on the need for change depend on their roles and levels in the organization, their environments, perceptions, performance measures and
incentives, and the training and experience they have received. The reactions of peers, supervisors, and subordinates as well as an individual’s own personality all influence how each person looks at the world. When there has been no well-thought-out effort to develop a shared awareness concerning the need for change, then piecemeal, disparate, and conflicting assessments of the situation are likely to pervade the organization.8

Look at the responses of different constituencies to the big issues of our day, and examples of the above proliferate. Take air quality. The adverse effects of poor air quality on public health are well documented. However, if you review the ongoing debate concerning the urgency of the problem and how we should go about addressing it, you will see various stakeholders with different vested interests and perspectives, marshal evidence to advance their point of view and protect their position. As a result, meaningful problem solving is delayed or sidetracked. Appropriate analyses, actions, and interventions are delayed, with predictable consequences, unless a disaster, very visible near disaster, or a seismic shift in public opinion occurs that galvanizes attention and precipitates action.

People often see change as something that others need to embrace and take the lead with. One hears: “Why don’t they understand?” “Why can’t they see what is happening?” or “They must be doing this intentionally?” But stupidity, blindness, and maliciousness are typically not the primary reasons for inappropriate or insufficient organizational change. Differences in perspective affect what is seen and experienced. As the attributions of causation shift, so too do the beliefs about who or what is the cause of the problems and what should be done.9 A common phenomenon called responsibility diffusion often occurs around changes. Responsibility diffusion happens when multiple people are involved and everyone stands by, assuming someone else will act.10

In terms of the change-management process, the focus of this chapter is on the “Awakening” box contained in Figure 4.1. To address this, change leaders need to determine the need for change and the degree of choice available to them and/or the organization about whether to change. Further, they need to develop the change vision and they need to engage others in these conversations so that a shared understanding develops. Without these in hand, they are in no position to engage others in conversations about the path forward.

This chapter asks change leaders, be they vice presidents, line operators, or volunteers at their local food bank, to seek out multiple perspectives as they examine the need for change. There is typically no shortage of things that could be done with available resources. What, then, gets the attention and commitment of time and money? What is the compelling reason for disrupting the status quo? Are there choices about changing and, if so, what are they? In many cases, it is not clear that change is needed. In these cases, the first step is for leaders to make a compelling case for why energy and resources need to be committed to a particular vision. Addressing these concerns advances the unfreezing process, focuses attention, and galvanizes support for further action.

But recognizing the need and mobilizing interest are not sufficient—a change leader also needs to communicate a clear sense of the desired result of the change.
Change leaders do this by creating a compelling vision of the change and what life will look like after it is implemented. This approach to creating momentum is the focus of the latter half of this chapter.
Understanding the Need for Change

The change process won’t energize people until they begin to understand the need for change. People may have a general sense that things are amiss or that opportunities are being missed, but they will not mobilize their energies until the need is framed, understood, and believed. An organization may have amassed data on customers, production processes, suppliers, competitors, organization financials, and other factors, but nothing will happen until someone takes the information and communicates a compelling argument concerning the need for change. Advancing the change agenda is aided by being able to address the following questions:

DEVELOPING AN ASSESSMENT OF THE NEED FOR CHANGE

1. What do you see as the need for change and the important dimensions and issues that underpin it? How much confidence do you have in your assessment and why should others have confidence in that assessment? Is the appraisal of the need for change a solid organizational and environmental assessment, or is it a response to your personal needs and beliefs?

2. Have you investigated the perspectives of internal and external stakeholders? Do you know who has a stake in the matter and do you understand their perspectives on the need for change? Have you talked only to like-minded individuals?

3. Can the different perspectives be integrated in ways that offer the possibility for a collaborative solution? How can you avoid a divisive “we/they” dispute?

4. Have you developed and communicated the message concerning the need for change in ways that have the potential to move the organization to a higher state of readiness for and willingness to change? Or have your deliberations left change recipients feeling pressured and coerced into doing something they don’t agree with, don’t understand, or fear will come back to haunt them?

The challenges at this stage for change leaders are to develop the information they need to assess the situation, develop their views on the need for change, understand how others see that need, and create awareness and legitimacy around the need for change when a shared awareness is lacking. To make headway on these questions and challenges, change leaders need to seek out and make sense of external data, the perspectives of stakeholders, the internal data, and their own personal concerns and perspectives. (Figure 4.2 outlines these factors.)

Seek Out and Make Sense of External Data

Change leaders should scan the organization’s external environment to gain knowledge about and assess the need for change. Getting outside one’s personal
Figure 4.2 Developing Your Understanding of the Need for Change

- Develop Your Understanding of the Need for Change and Create Awareness and Legitimacy for It
  - Seek Out and Make Sense of External Data
  - Seek Out and Make Sense of the Perspectives of Other Stakeholders
  - Seek Out and Make Sense of Internal Data
  - Seek Out and Assess Your Personal Concerns and Perspectives

perceptual box helps to avoid blind spots that are created by “closed-loop learning.” Change agents may make incremental improvements and succeed in improving short-term results. However, change leaders may not be doing what is needed to assess the risks and opportunities and to adapt to the environment over the long term. Executives tend to spend too little time reflecting on the external environment and its implications for their organizations.

An organization that is experiencing an externally driven crisis will feel the sense of urgency around the need for change. In this case, the change initiator’s task will be easier. This crisis can be used to mobilize the system and galvanize people’s attention and actions. Without this, many within the organization may not perceive a need for change even though the warning clouds or the unaddressed opportunities may be keeping the change leader awake at night.

The value of seeing organizations as open systems cannot be underestimated. This analytic approach and the learning it promotes play an important role in the development of awareness, improved vision, and flexibility and adaptability in the organization. Often the question becomes for the change leader: “Which external data do I attend to?” A change agent can drown in information without a disciplined approach for the collection, accumulation, and integration of data. Consider how complex the innocuous-sounding task of benchmarking can become. The absence of a disciplined approach to data gathering may mean that time is wasted, that potentially important data go uncollected or are forgotten, or the data are never translated into useful information for the organization.

Some sources for data will be concrete (trade papers, published research, and news reports), while others will be less tangible (comments collected informally from suppliers, customers, or vendors at trade shows). Data collection can take a variety of forms: setting aside time for reading, participating in trade shows and professional conferences, visiting vendors’ facilities, and/or attending executive education programs. Just as important, the change leader should consider engaging

*Closed-loop learning is learning that focuses on current practices and perspectives rather than developing a deeper understanding of the complex interactions underpinning the situation, including the impact of the external environment.
others in processes related to framing the questions, identifying and collecting data, and systematically interpreting the results in a timely fashion. This makes the task more manageable, increases the legitimacy of the data and the findings, builds awareness and understanding of the need for change, and creates a greater sense of ownership of the process.

Working without awareness of the external environment is the equivalent of driving blind. And yet it happens all the time. For a variety of reasons, ranging from a heavy workload or a sense of emergency, to complacency or arrogance, organizational leaders can be lulled into relying on past successes and strategies rather than investigating and questioning. In so doing, they risk failing to develop an organization’s capacity to adapt to a changing environment.17

Seek Out and Make Sense of the Perspectives of Stakeholders

Change leaders need to be aware of the perspectives of key internal and external stakeholders and work to understand their perspectives, predispositions, and reasons for supporting or resisting change. This will inform and enrich a change agent’s assessment of the need for change and the dynamics of the situation, and allow them to frame their approaches in ways that have a greater chance of generating needed support. Without such work, it is impossible to accurately assess perceptions of the situation and frame responses to questions that will resonate with those stakeholders—questions such as why change and what’s in it for me?18

Externally, these stakeholders may include suppliers, bankers, governmental officials, customers, and alliance and network partners. Internally, the stakeholders will include those individuals who are directly and indirectly affected by the change. If the change involved a reorganization of production processes, the internal stakeholders would include production supervisors, employees, union officials, human resources (recruitment and training implications), finance (budget and control processes), sales and marketing (customer service implications), IT (information implications), and engineering managers.

The point of view of the person championing the need for change will likely differ from the perspectives of other stakeholders. What is interesting and important to those stakeholders will vary, and this will affect what data and people they pay attention to and what they do with the information. If the change leader hopes to enlist their support or at least minimize their resistance, the leader needs to capture and consider their perspectives and the underlying rationale.19 Particular stakeholders may still remain ambivalent or opposed to the change, but not seeking them out and listening is likely to make things worse. Why create resistance if you don’t have to?

All of this highlights the importance of doing preparatory analysis and having a purposeful discussion, if possible, with affected stakeholders and those who understand their perspectives and can potentially influence them. It will increase the change leader’s awareness and sensitivity to the context, inform and strengthen the analysis, and indicate blind spots and alternative explanations and paths.
CHANGE VISION AT AN INSURANCE FIRM

When a North American insurance firm acquired one of its competitors, the senior manager in charge of integrating the acquisition was determined to have every employee understand the need for change, the new vision, and its implications. On the day the deal was announced, she made a live presentation (along with the CEO and other key officials) to employees at the head office of the acquisition and streamed the meeting live to all of the acquisition’s branch offices and facilities, as well as into the parent organization. She honored the acquisition’s senior management team, who were present, communicated the reasons for the acquisition and its implications for change, took questions, and encouraged employees to contact her with questions or concerns. She set up a special website and phone line to answer questions in a timely and direct manner and followed this with visits to all the offices, key customers, and suppliers over the next two months. She held two additional town-hall meetings with employees over the next year to communicate the status of integration activities and reduce anxiety.

An integration team from the acquiring firm was deployed to the acquired firm the day the deal was announced. After introducing themselves and their mandate, specific initiatives were commenced with staff to align key systems and processes and develop strategic and tactical plans. Leaders from the integration team visited key groups at all levels in the acquired organization to discuss the need for change, to discuss their current position in the marketplace, and to review how the roles and responsibilities were currently organized. Integration team members communicated what they knew, listened hard, and made firm commitments to get back with answers by specific dates. The integration team honored those commitments, including the communication of the new organization’s strategic and tactical plans and clarification of each person’s employment status, within 90 days of the acquisition. Like the senior manager responsible for the integration of the acquisition, the integration team communicated candidly, listened, and adjusted to assessments of the need for change and the strategic path forward, based upon what they learned. The team’s approach tapped into the emotional needs of “acquired” employees, reducing their anxieties, instilling hope for the future, and illustrating that their views and concerns were heard. Employee surveys, low absentee and turnover rates, and performance data confirmed this.20

The change agents for the insurance firm did their homework when developing and communicating the need for change. They openly engaged stakeholders in dialogue, listened and responded with care and consideration, and then proceeded to the next stage in the change process. Too many executives underestimate the need for communication and the importance of it being two-way. There can never be too much top-level communication and support, but unfortunately, there is often far too little listening. A rule of thumb for managers is to talk up a change initiative at least three times more than you think is needed and listen at least four times as much as you think you should!21 One change leader states that messages need to be communicated 17 times before they get heard!22
Seek Out and Make Sense of Internal Data

It is no surprise that change leaders need to pay careful attention to internal organizational data when developing their assessment of the need for a particular initiative. Change agents who command internal respect and credibility understand the fundamentals of what is going on within a firm. Change leaders need to know what can be inferred from internal information and measures, how these are currently being interpreted by organizational members, and how they may be leading the firm down the wrong path. Some of this will be in the form of so-called hard data—the sort that can be found in the formal information system and it is often numeric in nature (e.g., customer retention and satisfaction, service profitability, cycle time, and employee absenteeism). Other valuable information will be soft data, the intuitive information gathered from walking around the building and other work areas and having discussions with critical stakeholders. For example, do employees generally pick up litter such as candy wrappers, or is that task left exclusively to the janitorial staff? The former often indicates widespread pride and feelings of ownership in an organization.

Seek Out and Assess Your Personal Concerns and Perspectives

“Know thyself” is a critical dictum for change leaders. Change agents need a good understanding of their strengths and weaknesses, attitudes, values, beliefs, and motivations. They need to know how they take in information and how they interpret and make decisions. They need to recognize their preferences, prejudices, and blind spots. As change agents expand their self-awareness, they are freer to ask questions and seek help when they need it.23

“I think it’s a combination of how self-aware people are and how honest they are. I think if someone is self-aware, then they can always continue to grow. If they’re not self-aware, I think it’s harder for them to evolve or adapt beyond who they already are.”

Tony Hsieh, CEO, Zappos.com, Inc.24

During the Cuban Missile Crisis, October 1962, Collins and Porras report that President Kennedy was incredibly comfortable with expressing what he did not know and asking many questions before passing judgments.25 This led to informed decision making that may have saved the world from World War III. Many change leaders have difficulty publicly owning the fact that they do not have all the answers and demonstrating a real interest in listening and learning. They likely have noticed that someone who communicates more confidence in their judgment tends to be responded to more positively than a person who is more cautious—particularly if the audience is predisposed to that point of view.
However, behavioral economists have found that this can lead to serious errors of judgment. For example, those individuals in the media who are most self-assured in their judgment are significantly less accurate than those who are more nuanced in their assessments. We may love their bravado and certainty, which helps explain their frequent appearances on TV, but beware of putting too much trust in their conclusions. In 2002–2003 Vice President Dick Cheney’s confidence in Saddam Hussein and Iraq’s possession of weapons of mass destruction was absolute, and yet, U.S. forces found very few.

Reputations for skill, judgment, and success develop over time, and this development is aided by a greater willingness to look, listen, and learn before committing to a course of action. As Daniel Kahneman and his colleagues have noted, dangerous biases creep into important decision making and these need to be guarded against. Taking steps that keep you open to learning and rigorously testing your assumptions and biases can help you avoid decision traps and greatly benefit the quality of the final choice. These actions reinforce the value of looking before you leap in others. They build trust in your judgment, knowing that you’ve done your homework and considered the situation and options seriously, and show others that a little humility in one’s judgment never hurts.

**NEW LEADERSHIP AT MICROSOFT**

With the selection of Satya Nadella as its CEO in February 2014, Microsoft is signalling a departure from the loudness of Steve Ballmer and a return to someone much more like Bill Gates in his skill sets and approach to management. Nadella is reported to be very competent technically and managerially, and to have demonstrated this over the years at Microsoft, as he has successfully led significant change initiatives, most recently at the Cloud and Enterprise group. People report that he has done so by asking questions, listening, and engaging and energizing participants in ways that allow them to get out of their comfort zone and succeed. Those who have worked with him say he is honest, inclusive, authentic, and caring—generating success by thoughtfully nurturing the involvement and commitment of those around him.

Whenever we, the authors, work with groups of university students, or managers and executives who are attempting organizational change, we caution them not to assume that their perspectives are held by all. They often fail to understand the impact of their own biases, perspectives, and needs and how they differ from those of others involved in a change initiative. They believe that they understand the situation and know what must change; this attitude can create significant barriers to accomplishing the change objectives. The strength of their concerns combined with their lack of self-awareness creates blind spots and causes them to block out dissenting perspectives. When they talk to stakeholders, they may receive polite responses and assume that this implies a commitment to action. Statements such as “That’s an interesting assessment” are taken as support rather than as neutral
comments. Their inability to read subtle cues or misinterpret legitimate concerns as resistance, rather than thoughtful feedback, leads them astray.

In an extreme attempt to protect himself and his followers from his personal shortcomings and cult-like reputation, Nehru, one of the founding fathers of modern, independent India, used an alias when he wrote the following about himself in a prominent publication in 1937. The backdrop was the struggle for independence from Britain, which was achieved 11 years later.

What lies behind that mask of his, what desires, what will to power, what insatiable longings? Men like (Nehru) with all their capacity for great work, are unsafe in democracy . . . every psychologist knows that the mind is ultimately a slave to the heart and logic can always be made to fit in with the desires and irrepressible urges of a person . . . (Nehru’s) conceit is already formidable. It must be checked. We want no Caesars.30

—Nehru writing in the press about himself, using an alias

Nehru’s deep commitment to India’s independence did not blind him to how his own ego and the burgeoning hero worship that he was experiencing might impair the goal of a democratic India that would need an electorate that exercised thoughtful discourse and informed decision making. As such, he publicly noted the trend toward hero worship and its intoxicating impact on himself and his followers.

This section asks change leaders to consider their readiness for leading a change initiative and the roles that they will play in the process. It asks change agents to assess their skills, abilities, and predispositions to assess and guide the change. In Chapter 8, change agents will again be asked to look in a mirror and assess their predispositions toward various change agent roles. See Toolkit Exercise 4.2 to understand and diagnose a need for change.

Assessing the Readiness for Change

Understanding the need for change and creating a vision for change are closely linked. Diagnosing where an organization is in the present moment is a prerequisite for figuring out its future direction. Beckhard and Harris31 argue that addressing the question “Why change?” is a necessary precondition to being able to define the desired future state or the vision. If the question of “Why change?” is never meaningfully addressed, no one should expect the emergence of any sense of a shared vision. The answer to “Why?” is a prerequisite to the “What?” and the “How?” of change.

While dissatisfaction with the status quo by senior managers is certainly very helpful in advancing change, it is unlikely to be a sufficient condition. Spector32 argues that the creation of dissatisfaction among others is needed. This dissatisfaction can be developed by sharing competitive information, benchmarking the organization’s performance against others, challenging inappropriate behaviors
through highlighting their impact, developing a vision for the future that creates frustration with the present state, and simply mandating dissatisfaction if one has the clout. Being dissatisfied with the status quo helps to ready the organization for change. That readiness depends on previous organizational experiences, managerial support, the organization’s openness to change, its exposure to disquieting information about the status quo, and the systems promoting or blocking change in the organization.

Change initiators may understand the need for change, but other key stakeholders may not be prepared to recognize that need or believe it is strong enough to warrant action. Newspaper accounts of the failure to react in time are all too common (e.g., Chrysler in the auto industry, Target (Canada) and Kmart in retailing, Yahoo and BlackBerry in the digital world). Though a litany of reasons are offered in the press, two common themes emerge: (1) Management failed to attend to the warning clouds or the opportunities that were clearly visible, often well in advance; and (2) when management took actions, they did too little too late. Past patterns of success can lead to active inertia (doing more of the same), flawed environmental scanning and assessments, and other factors that will be discussed later in the chapter that sabotage organizational members’ capacity to successfully adapt.

Organizational readiness for change is determined by the previous change experiences of its members; the flexibility and adaptability of the organizational culture; the openness, commitment, and involvement of leadership in preparing the organization for change; and member confidence in the leadership. It is also influenced by the organizational structure, the information members have access to, reward and measurement systems, resource availability, and the organization’s flexibility and alignment with the proposed change. This theme goes back to Chapter 3’s discussion of Nadler and Tushman’s Congruence Model and the importance of alignment. Readiness is advanced when organizational members can see how the existing alignment is getting in the way of producing better outcomes and believe that the needed realignment can be achieved. An organization’s readiness for change will influence its ability to both attend to environmental signals for change and listen to internal voices saying that change is needed.

Previous experiences affect individual readiness for change. If organizational members have experienced more gain than pain from past change initiatives, they will be more predisposed to try something new. However, there is also the risk that they may resist changes that divert them from initiatives that have worked in the past.

If previous change experiences have been predominantly negative and unproductive, employees tend to become disillusioned and cynical (“we tried and it didn’t work” attitude). However, under the right conditions, this situation may produce increased resolve concerning the need for change. (Reactions to past change experiences will be discussed further in Chapter 7.)

Writers regularly report that the development and maintenance of top management’s support is crucial to change success. If senior managers are visibly supporting the initiative, are respected, and define and tie their success to the change initiative, then the organization is likely to be receptive to change. However, it is not unusual to find differences of opinion concerning change at the senior management
level, so a lack of initial support is a reality that many change leaders must navigate. The beginning of any change journey can feel quite lonely, because though you and a few others have become convinced of the need for change, others may have quite different opinions about the need or not yet have given the matter much thought. This includes senior management. Perhaps more troubling situations than the lack of visible support occur when senior management assures change agents of support but fails to provide it at crucial moments because it isn’t one of their priorities or they choose to engage in passive forms of resistance.

Organizations that have well-developed external scanning mechanisms are likely to be aware of environmental changes. Cultures and systems that encourage the collection and objective interpretation of relevant environmental, competitive, and benchmark data tend to be more open to change and provide members of the organization with the information they need to provoke their thinking concerning the need for change.41 If the culture supports environmental scanning and encourages a focus on identifying and resolving problems rather than “turf protection,” organizations will be more open to change.

**READYING AN ORGANIZATION FOR CHANGE**

Armenkis and his colleagues42 identified factors for readying an organization for change. Their list includes:

1. The need for change is identified in terms of the gap between the current state and the desired state.
2. People believe that the proposed change is the right change to make.
3. The confidence of organizational members has been bolstered so that they believe they can accomplish the change.
4. The change has the support of key individuals the organizational members look to.
5. The “what’s in it for me/us” question has been addressed.

Holt was concerned about an organization’s readiness for change and developed a scale based on four beliefs among employees: They could implement a change, the change is appropriate for the organization, leaders are committed, and the proposed change is needed.43 Judge and Douglas were also interested in calibrating an organization’s readiness for change and utilized a rigorous approach to identify eight dimensions related to readiness:

1. Trustworthy leadership—the ability of senior leaders to earn the trust of others and credibly show others how to meet their collective goals
2. Trusting followers—the ability of nonexecutives to constructively dissent or willingly follow the new path
3. Capable champions—the ability of the organization to attract and retain capable champions
4. Involved middle management—the ability of middle managers to effectively link senior managers with the rest of the organization
5. Innovative culture—the ability of the organization to establish norms of innovation and encourage innovative activity
6. Accountable culture—the ability of the organization to carefully steward resources and successfully meet predetermined deadlines
7. Effective communications—the ability of the organization to effectively communicate vertically, horizontally, and with customers
8. Systems thinking—the ability of the organization to focus on root causes and recognize interdependencies within and outside the organization's boundaries.44

Table 4.1 contains a readiness-for-change questionnaire. It reflects the questions and issues raised in this section and provides another method for helping change leaders assess an organization's readiness for change.45 By considering what is promoting and inhibiting change readiness, change agents can take action to enhance

The scores can range from –10 to +35.

The purpose of this tool is to raise awareness concerning readiness for change and is not meant to be used as a research tool.

If the organization scores below 10, it is not likely ready for change and change will be very difficult.

The higher the score, the more ready the organization is for change. Use the scores to focus your attention on areas that need strengthening in order to improve readiness.

Change is never “simple,” but when organizational factors supportive of change are in place, the task of the change agent is manageable.

---

Readiness—a change task in and of itself. For example, if rewards for innovation and change are seen to be lacking, or if employees believe they lack the needed skills, steps can be taken to address such matters. When considering rewards, remember...
these include intrinsic as well as extrinsic rewards. The impact of rewards on judgment and behavior needs to be considered carefully, because it can be complicated. For example, excessive rewards for success or excess punishment for failure are more likely to produce unethical behavior. Alternatively, intrinsic rewards and moderate levels of equitable extrinsic rewards that are nested in teams can heighten information sharing, motivation, and commitment. More will be said about this in later chapters. Change readiness must be consciously developed, aligned with supportive systems and structures, and then put to use as a source of competitive advantage. Developing change readiness is an important matter in both public and private organizations.

**Heightening Awareness of the Need for Change**

When an organization is open to change, thinking individuals will still want to critically assess the evidence concerning the need for change. The change leader may experience blanket resistance and defensiveness, or may experience more localized opposition. Individuals may recognize the need for change in some departments and functions but be resistant to recognizing the need for change as it gets closer to home. If they see only the unraveling of what they’ve worked to accomplish and/or unpleasant alternatives ahead for them, they will be very reluctant to embrace change proposals. Even when the need for change is broadly recognized, action does not necessarily follow.

**FROM BAD TO WORSE: GARBAGE SERVICES IN NAPLES, ITALY**

Naples, Italy, has lived with a garbage problem for years. Poor management, organized crime, and ineffective political leadership allowed the matter to fester and escalate. In 2008, worldwide coverage of the problem drew attention and political promises for action, as 55,000 tons of uncollected garbage filled city streets, and 110,000 to 120,000 tons awaited treatment in municipal storage sites. Though the streets are now cleaner, resolution has been slow and suspect. Untold tons of irresponsibly (some would argue criminally) handled waste continue to reside in illegal landfills that dot the countryside, or they have been shipped elsewhere for questionable “disposal.” The results have fouled the environment, endangered health, seriously harmed Naples’ economy, and required deployment of the army in 2008 and 2011 to deal with uncollected garbage. In November 2013, the legacy created by decades of mismanagement and corruption erupted very publicly yet again—this time in the form of burning trash heaps on the outskirts of Naples that were producing toxic fumes and threatening water quality and food safety in the region.

In the story above, the need for change seems obvious. However, the politicians of the city and other levels of government were reluctant to take the difficult steps
needed to deal with the problems. Clearly, Naples and her citizens were not yet prepared to undertake the type of change needed.

Once change leaders understand the need for change, they can take different approaches to heighten the awareness of the need throughout the organization. Change leaders can:

1. Make the organization aware that it is in or near a crisis or creating a crisis that needs to be solved.
2. Identify a transformational vision based on higher-order values.
3. Find a transformational leader to champion the change.
4. Take the time to identify common or shared goals and work out ways to achieve them.
5. Use information and education to raise awareness of the need for change.

The first method is a form of shock treatment and involves either making the organization aware that it is in or near a crisis or creating a crisis that needs to be solved. Many of the dramatic turnaround stories that are reported are successful because the actions of people were galvanized and focused by the necessity for action. In the face of crisis, people find it difficult to deny the need to change and to change now. When the crisis is real, the issue will be one of showing others a way out that they will follow if they have any confidence in its viability, given that the alternatives are far from attractive.51

At times, managers will be tempted to generate a crisis, to create a sense of urgency to change and mobilize staff around a change initiative that may or may not be fully justified. Creating a sense of crisis when one does not really exist must be approached with care.52 If mishandled, it may be viewed as manipulative and result in heightened cynicism and reduced commitment. The change leader’s personal credibility and trustworthiness are then at stake. The reputation developed in and around change initiatives casts a long shadow, for better or worse. The currencies that change agents use are credibility and trustworthiness. These take a long time to develop and can be quickly squandered.53

An extension of the crisis is the “burn or sink your boats approach.” In this case, the change leader takes the process one step further and cuts off any avenue of retreat. That is, there is no going back. This approach is based on the belief that this will lead to increased commitment to the selected course of action. While it may aid in focusing attention, this approach can increase many of the risks outlined above. In particular, individuals may resent being forced into a situation against their will. It may produce compliant and even energized behavior in the short term due to the absence of alternatives, but it can give rise to undesirable long-term consequences if the actions come to be viewed as being inappropriate or unfair. Consequences can include elevated levels of mistrust, reduced commitment, and poor performance.54
CREATING URGENCY AT NEW YORK CITY’S METROPOLITAN TRANSIT AUTHORITY (MTA)

In October 2012, Hurricane Sandy left huge challenges for NYC’s MTA. MTA used the sense of urgency to motivate staff to think in creative ways to get the most essential job done. The priority was to get the city connected and moving after the storm. Despite there being no emergency handbook for this kind of situation, the MTA was able to get partial service up within days and full lines running within a week.55

In the wake of Hurricane Sandy, the transit system was underwater in many areas, infrastructure had been destroyed, and virtually nothing was running. The crisis faced by Joseph Leader, the subway’s chief maintenance officer, and all the other executives and staff, was both real and devastating. They knew tough decisions were needed around the alignment and coordination of resources, and that a huge amount of work would be required to get the city’s transit system operational. A competent and highly motivated staff, combined with the powerful shared goal of getting the trains moving, allowed them to mobilize, sort out what needed to be done, and act—even in the absence of protocols.

Urgency is straightforward when there is an event such as Sandy. However, it can prove more difficult when it evolves more slowly, such as deteriorating market conditions, or in the case of not-for-profits such as government agencies, deteriorating service standards or relevance to the public. With the right use of data and influence approaches, people can be woken up. Creating a sense of social/political urgency through advocacy approaches has proven powerful in the public square, as seen in the Arab Spring in Tunisia and Egypt during 2010–2012 and pressure for change in the Department of Veterans Affairs in the United States.56 Likewise, approaches that disrupt existing perspectives, challenge past learning, and hasten the adoption of new perspectives through creating a sense of urgency have been shown to help new product development teams get out of ruts and become more effective, though they do have to guard against information and knowledge loss in the process.57

A second approach to enhancing people’s awareness of the need for change is by identifying a transformational vision based on higher-order values, such as the delivery of superb service and responsiveness. Transformational visions tap into the need for individuals to go beyond themselves, to make a contribution, to do something worthwhile and meaningful, and to serve a cause greater than themselves. These appeals can provide powerful mechanisms to unfreeze an organization and create conditions for change. In addition, transformational visions pull people toward an idealized future and a positive approach to needed change.

Cynics in an organization may reject these vision appeals for several reasons. They may see them as superficial, naive, ill-advised, off-target, or designed simply to serve the interests of those making the pronouncements. If organizational
members have previously heard visionary pronouncements, only to see them ignored or discarded, they may believe the most recent iteration is simply the current “flavor of the week” approach to change.

Change agents need to ask themselves if they are really serious about following through on the values and action orientation that underlie their visionary appeals. If they are not, then they should stop rather than contribute to the build-up of organizational cynicism and alienation that accompanies unmet expectations. Nevertheless, the power of truly transformational visions should not be underestimated. How else do we understand the response to the visionary perspectives provided by change leaders such as Mahatma Gandhi and Nelson Mandela?

A third approach to enhancing the need for change is through transformational leadership. Leadership in general and transformational leadership in particular continue to command attention in the change literature—not surprising, given its stature in Western culture and mythology. From George Washington to Adolf Hitler, from Nelson Mandela and Mother Teresa to Saddam Hussein, we’ve elevated the heroes and condemned the villains.

The same is true for the corporate world. Steve Jobs’s resuscitation of Apple, Mukesh Ambani’s leadership at Reliance (one of India’s most valuable companies), Anne Mulcahy’s transformation of Xerox, Thomas Tighe’s work at Direct Relief International (a not-for-profit organization), Oprah Winfrey’s growth of a media empire, Richard Branson’s entrepreneurial initiatives at Virgin, and Elon Musk’s development of PayPal, SpaceX (private sector rocket firm that delivers supplies to the space station), and the Tesla automobile...they all provide examples of the work of successful transformational leaders. The appeal of charismatic and transformational individuals is powerful. In addition to effectively framing the change vision as noted above, they have the capacity to create strong, positive personal connectedness and a willingness to change in followers that often overrides the followers’ personal concerns. However, corporate scandals (e.g., Bernie Ebbers of WorldCom, Bernie Madoff of Madoff Investment Securities, Angelo Mozilo of Countrywide Financial, and Lance Armstrong and the Livestrong Foundation) remind people of the risks of idolizing transformational exemplars. Even GE’s Jack Welch’s image took a beating with published reports of his divorce battles and the size and nature of his retirement package.

Caution is needed if you are relying on charisma to induce followers to change an organization. In an example cited earlier in this chapter, Nehru’s concern over the impact of his charisma caused him to take public steps to rein it in. If the use of charisma is thought to be helpful, certain questions come to mind. First of all, do you have the necessary skills? Many people lack the capacities needed to create a charismatic response in others, and they may also lack access to someone who supports the change and possesses those skills. More important, is this the best approach to mobilizing people around a vision of change? Charismatic appeals can prove powerful and helpful (Barack Obama’s successful 2008 and 2012 presidential campaigns attest to this), but there are good reasons for people to be suspicious of charismatic appeals because history demonstrates that personal magnetism is not always directed toward desirable outcomes.
It is important to note that many leaders are very effective change agents without being particularly charismatic. Some of those who have proven to be most influential in nurturing long-term organizational success have been much quieter in their approach.60 Such a list would include Meg Whitman, CEO of HP; Satya Nadella, CEO of Microsoft; Warren Buffett of Berkshire Hathaway; Michael Latimer, president and CEO of OMERS, a large Canadian pension fund; Ursula Burns, CEO of Xerox; and Ellen Kullman, CEO of DuPont.

A fourth way of stimulating awareness of a need for change is by taking the time to identify common or shared goals and working out ways to achieve them. Finding common areas of agreement is a very useful way to avoid and/or surmount resistance to change. Instead of focusing on what might be lost, an examination of the risks of not taking action and what will be gained by taking action can create momentum for change. This is often achieved by having people seriously consider their longer-term interests (rather than their immediate positions) and the higher-order and longer-term goals that they would like to see pursued. If the change leader can focus on the needs of resisting individuals or groups, new and interesting perspectives on change can emerge. Shared interest in and commitment to higher-order or superordinate goals can provide a powerful stimulus for commitment and mobilization.

Fifth, information and education can be used to raise awareness of the need for change. In many respects, this is the inverse of the “sink your boats” command-and-control approach to change, because it seeks to build awareness and support through information rather than edict. Reluctance to change may be a result of lack of information or confusion about multiple and sometimes conflicting sources of information. This can be overcome with a well-organized communications campaign that provides employees with the needed information (e.g., best practices, benchmark data about the practices and approaches of others, visits with others to see and hear about their practices, competitive data, and other research).61 Research on effective organizations can provide a compare-and-contrast picture to an organization’s current mode of operation and that process can stimulate discussion and facilitate change.

EDUCATING PROGRAMMERS AT GTECH

GTECH was an extremely successful gaming technology and services company, but in 2002 Richard Koppel, VP of Advanced Technologies, knew change was needed. “Our systems were old, inflexible, and highly proprietary... Unless the company overhauled its technology platform, we wouldn’t be able to innovate quickly or affordably enough to meet customers’ needs.” The executives at GTECH supported him, but there was stiff resistance from below. To create a sense of urgency, he and other executives repeatedly communicated and visited with the product developers to educate them about what was at risk. Discussions during regular staff meetings, dissemination of articles, and having GTECH’s software developers talk about the issue with peers in other high-tech organizations (Continued)
(Continued)

further reinforced the message concerning the need for change.\textsuperscript{62} Resistance
was reduced as a result of these actions, and the subsequent changes contrib-
uted to significant improvements to their financial performance over the next
several years.

Once again, the change agent's credibility is crucial. If employees are suspicious
of the motives of the change agent, the accuracy of the information, or there has
been a history of difficult relationships, then the information will be examined with
serious reservations. When employees come to accept the information and related
analyses, the ground is fertile for the development of a shared sense of the need and
the vision for change.

**Factors That Block People From Recognizing the Need for Change**

Giving voice to the need for change can create awareness in employees. However,
future directions are not always obvious and an organization's history and culture
can be strong impediments to creating awareness of the need for change. It took
Hewlett-Packard a number of years of poor performance, problematic acquisitions,
and related stumbles under different CEOs (most notably Carly Fiorina) until they
recognized that cobbling in poorly fitting acquisitions to boost market share, and
focusing primarily upon efficiency and cost reduction by playing with structures
and product/service portfolios, would not reverse the fortunes of their business.
Meg Whitman, the retired CEO of eBay, stepped into this very difficult situation
and has led the revitalization of storied HP by valuing its roots, leading the conver-
sation around the need for change, working to create a sense of urgency and hope,
and taking actions to remove some of the obstacles in the way.

**REVERSING THE DEATH SPIRAL AT HEWLETT-PACKARD**

Hewlett-Packard had demonstrated commitment over the years to the belief
that long-term success was grounded in the “HP Way”—a cultural perspective
that celebrated technical expertise, flexibility, and innovation; placed high value
on their collegial, teamwork-based environment; saw employees as their most
important resource; and had a strong customer orientation and commitment to
act with integrity at all times. However in 1999, following a period of lackluster
performance, HP hired Carly Fiorina as their CEO. Fiorina’s top-down leadership
style put results as the number one priority and arguably devalued employees.
Her autocratic and aggressive style left her workforce demoralized. The ill-
conceived merger with Compaq and a number of other major actions such as
the restructuring of the enterprise into a much more hierarchical one, generated
sustained, deepening disappointment on the performance front.
It could be argued that Fiorina suffered from tunnel vision concerning how to act on the need for change and manage the path forward. This blocked her from realizing how to value what was there, respond constructively to the challenges they faced, and modify her management style to facilitate needed changes. The results of her actions demoralized members of the firm, generated significant turnover, and adversely affected the entire organization.

Following Fiorina’s dismissal in 2005 and subsequent flawed efforts to get things back on track, the board appointed Meg Whitman as CEO in 2011. At that point, many believed HP was operating on borrowed time. A number of the members of the existing senior management team were reported to have been very unhappy with her appointment. Whitman was an outsider, and some of them had been jockeying for the top job.

Whitman knew that hard choices were needed. These included making major changes to her senior management team, to get rid of infighting and promote much-needed cooperation and constructive engagement. Major job cuts (34,000) had to be made to address cash flow and market realities. However, she also clearly signaled a return to the organization’s roots, by restoring funding and executive support for what was then a gutted and demoralized R&D function, symbolizing their commitment to innovation. She made the need for change salient to organizational members and created a sense of urgency. The enterprise was restructured to better align it with the emergent strategy, and she reinforced the importance of having a clear customer focus rather than one driven solely by cost-cutting pressures. Further, she created a vision for the future that offered employees reasons for hope and regenerated shared commitment through the focus on teamwork, collaboration, excellence in execution, and shared celebrations of success. Changes of this magnitude do not happen overnight. HP’s impressive return to cultural and financial health by 2014 (stock price up 300% since 2011; being recognized as one of the 100 top employers in Canada in 2014) show that they appear to be well on their way.

All too often, strategists will introduce a new direction and seek to change the organizational culture without attending to the question of the impact of cultural artifacts on the desired change. Cultural artifacts are the stories, rituals, and symbols that influence employees’ attitudes and beliefs; they are important because they help to define and give life to the culture. If change agents continue to tie themselves to those artifacts, they may reinforce the old culture they wish to change. However, being dismissive of the past can also be problematic because it may send signals that things done in the past are no longer valued. The challenge is: how do you value the past and its positive attributes without trapping yourself in the past? In 1994, Bethune and Brenneman faced this challenge when they tackled the turnaround of Continental Airlines, taking the firm from near bankruptcy and the worst customer service ratings in the industry to success on all fronts over the next decade. One of the major reasons that they were successful in implementing a turnaround was their introduction of new cultural artifacts that reinforced
service as a key value rather than staying anchored to those artifacts that signaled poor service.

**CULTURAL CHANGE AT CONTINENTAL AIRLINES**

A new reward system was put into place at Continental that focused on improved service. Performance-reward systems, in and of themselves, are not necessarily cultural artifacts, but this new reward system contrasted with past practices. It was tied directly to corporate performance, and the financial rewards were paid in a separate check to employees to draw attention to the relationship between performance and rewards. This reward system not only reinforced a new value at Continental, but it also became a symbol to employees of the importance of high levels of performance in the new Continental, as opposed to the acceptance of poor performance, as had been the case in the old Continental. In addition, stories were told throughout Continental about how the new CEO told jokes to employees, answered questions honestly, and was an all-around good guy to work for. These and numerous additional artifacts replaced old ones that had reinforced bureaucracy and the acceptability of poor performance and that had led to unbelievably low employee morale. They succeeded in sustaining positive changes in customer service and fleet performance over the years, and their financial performance reflected their success in this very competitive industry. In 2009, *Fortune* magazine named Continental the world’s most admired airline, and the World Airline Awards recognized it as the best North American airline. In 2010 United Airlines acquired Continental.

Both the Continental and HP examples show that the existing culture can impair organizational members’ capacity to either recognize the urgency of the need for change, or believe that there is the organizational will to constructively respond. Even if organizational members recognize the need, culture can impede their ability to take appropriate actions until things occur that weaken the existing beliefs and open the way to new thinking about the organization, the current situation, and its leadership. When this occurred at Continental and HP, the door was opened to meaningful change. Actions that created reasons for hope and reinforced the development and strengthening of new cultural beliefs ensured that the organization would continue its journey in a positive direction and wouldn’t regress to old patterns.

Culture can get in the way of recognizing the need for change in poorly performing firms. However, it can represent an even more difficult barrier in successful firms. Consider Unilever, which had great brands and a long history in emerging markets and yet was falling behind competitors in those same markets. They knew they needed to change something but were mentally locked into the business practices that had become sources of disadvantage. In 2004, they finally recognized the sources of the problem and by 2006 were reaping the benefits in terms of renewed
growth and profitability. Unilever’s performance was adversely affected by the 2008 recession, along with all their major competitors, but their renewed competitive capacities facilitated their recovery by 2010 and led to all-time share price highs in 2014.69

Sull argues that organizations trapped in their past successes often exhibit lots of activity (this was true for Unilever), but the outcome is “active inertia,” because they remain essentially unchanged.70 Even when organizations recognize that they need to change, they fail to take appropriate actions. He believes this occurs because:

- **Strategic frames**, those mental models or sets of assumptions of how the world works, become blinders to the changes that have occurred in the environment;
- Processes harden into routines and habits, becoming ends in themselves rather than means to an end;
- Relationships with employees, customers, suppliers, distributors, and shareholders become shackles that limit the degrees of freedom available to respond to the changed environment; and
- Values, those deeply held beliefs that determine corporate culture, harden into dogma, and questioning them is seen as heresy.

During periods of financial difficulty or decline, senior management teams may become polarized in their positions, isolate themselves from data they need, and incorrectly assess the need for change. Senior management teams may prevent critical information from surfacing as they self-censor, avoid conflict, and/or are unwilling to solicit independent assessments as they attempt to preserve cohesion and commitment to a course of action.71 These are conditions that lead to groupthink† and can result in disastrous decisions that flow from the flawed analysis.72 Change agents need to be vigilant and take action to ensure that groupthink does not cloud a team’s capacity to assess the need for change or impair the judgment of the teams with which they are working. If change agents are dealing with a cohesive team exhibiting the characteristics of groupthink, the agents need to take action with care, considering how to make the group aware of factors that may be clouding the group’s judgment. Change agents who attempt to alert such teams to these realities are often dealt with harshly, since “shooting the messenger” is a speedy way for teams to protect themselves from difficult data. Strategies for avoiding groupthink include:

- Have the leader play an impartial role, soliciting information and input before expressing an opinion.
- Actively seek dissenting views. Have group members play the role of devil’s advocate, challenging the majority’s opinion.

†Groupthink is “a mode of thinking that people engage in when they are deeply involved in a cohesive in-group, when the members’ striving for unanimity overrides their motivation to realistically appraise alternative courses of action.” Retrieved December 2010 from wps.prenhall.com/wps/media/objects/213/218150/glossary.html
• Actively pursue the discussion and analysis of the costs, benefits, and risks of diverse alternatives.
• Establish a methodical decision-making process at the beginning.
• Ensure an open climate for discussion and decision making, and solicit input from informed outsiders and experts.
• Allow time for reflection and do not mistake silence for consent.  

Additional factors that obstruct managerial judgment over the need for change and the inability to develop constructive visions for future action have been highlighted in both the business and academic press. Ram Charan and Jerry Useem summarize such factors in their 2002 *Fortune* magazine article on the role executives play in organizational failure:

• They have been softened by past success.
• They see no problems or at least none that warrant serious change (internal and external blindness).
• They fear the CEO and his or her biases more than competitors.
• They overdose on risk and play too close to the edge. This is often tied to systems that reward excessive risk taking.
• Their acquisition lust clouds their judgment.
• They listen to Wall Street more than to employees and others who have valuable insights they should attend to.
• They employ the "strategy du jour"—the quick-fix flavor of the day.
• They possess a dangerous corporate culture—one that invites high-risk actions.
• They find themselves locked in a new economy death spiral—one that is sustained and accelerating.
• They have a dysfunctional board that fails in its duties around governance. 

Developing a well-grounded awareness of the need for change is a critical first step for change leaders when helping organizations overcome inertia, rein in high-risk propensities, address internal and external blind spots, disrupt patterns of groupthink, and view their environment in ways that open organizational members to change.

So far, this chapter has outlined the variety of perspectives that will exist regarding the need for change. It emphasizes that the perspective of the change leader may not be held by others and that often change leaders need to develop or strengthen the need for change before trying to make specific changes. One of the ways to enhance the perceived need for change and begin to create focused momentum for action is to develop a clear and compelling change vision.

### Developing a Powerful Vision for Change

A vision for change clarifies the road ahead. It specifies the purpose of the change and provides guidance and direction for action. It can provide a powerful pull on
employees to participate positively in the change process. As Simons says, “Vision without task is a dream world and task without vision is drudgery.”

Visions can be used to strengthen or transform existing cultures. At a micro level, visions are used to focus awareness, energy, and initiative around local issues, processes, and opportunities. At their best, change visions provide well-grounded, challenging reasons for hope and optimism. At their worst, they are trite bromides that accelerate organizational cynicism, hallucinations that are confusing or misguided, or specific directions that are simply inappropriate or counterproductive.

Change leaders use visions to create and advance the mental pictures people have of the future and to provide directional guidance for stakeholders whom change agents need to enlist in the enterprise. Creating the vision is a key part of defining a future state and, in turn, it is central to any gap analysis done by a change leader.

Understanding the foundational components of organizational vision is important. In an ideal world, it is closely connected to the mission of the organization (its fundamental purpose or reason for existence) and informs the core philosophy and values of the institution. It addresses such questions as, “What does this organization stand for?” Vision identifies the desired ideal future. From this should flow the strategies, goals, and objectives. When change leaders have fully developed a change process, the strategies, goals, and objectives flow from the vision and will address three essential questions for an enterprise: What business are we in? Who are our target customers, and what is our value proposition to them? How will we deliver on our value proposition?

Change agents often create change visions or “sub-visions” in order to generate emotional energy, commitment, and directional clarity for the organizational change as the process proceeds from planning through to implementation in different departmental units. These allow the overall change vision to be adapted to reflect how it manifests itself within specific areas of the organization. If FedEx's overriding commitment to its customers for its express service is “absolutely, positively overnight,” then a change leader's vision concerning a logistics support initiative might deal with enhancing accuracy in package tracking to reduce error rates to below .00001%.

Beach states:

Vision is an agenda of goals . . . vision is a dream about how the ideal future might be . . . it gives rise to and dictates the shape of plans . . . vision infuses the plan with energy because it gives it direction and defines objectives. Even the most unassuming vision constitutes a challenge to become something stronger, better, different.

Approached properly, it can mobilize and motivate people and have a positive impact on performance and attitudes.

Change leaders need to know how to develop a vision. Jick outlines three methods for creating vision: leader-developed, leader–senior team-developed, and
bottom-up visioning. As the name suggests, leader-developed vision is done largely in isolation from others. Once it has been created, it is announced and shared with others in the organization. Leader–senior team-developed vision casts a broader net. Members of the senior team are involved in the process of vision formation. Once completed, it is then shared with others. Bottom-up visioning, or an employee-centric approach, is time-consuming, difficult, and valuable in facilitating the alignment of organizational members' vision with the overall vision for change. If a change leader can articulate a compelling vision that captures a broad spectrum of organizational members, then a leader-developed vision is likely appropriate. If, on the other hand, employees are diverse and have mixed feelings about the vision, then the change agent’s job will be difficult and a bottom-up approach will be necessary. If employees both “get it” (i.e., the vision) and “want to get it,” subsequent support for change will prove much easier to develop, leverage, and implement. This is particularly important when cultural changes are involved.

What does it take to develop an effective change vision? According to Todd Jick, good change visions are:

- Clear, concise, easily understood
- Memorable
- Exciting and inspiring
- Challenging
- Excellence centered
- Stable but flexible
- Implementable and tangible

The process of creating a vision statement encourages change agents to dream big. Paradoxically, when visions become too grand and abstract, they can cease to have much impact. Alternatively, they may provide guidance that energizes and mobilizes individuals to undertake initiatives that unintentionally work at cross purposes to other initiatives that have been embarked upon or that may even have the potential to put the organization at risk.

FOOD BANKS CANADA

“A Canada Where No One Goes Hungry”

Food Banks Canada is the national body that plays a leadership role with its 450 affiliated nonprofit food banks across the country and 10 provincial associations. Its corporate vision is to relieve hunger in Canada every day by raising food and funds to share with food banks nationally, delivering program and services to Canadian food banks, and influencing public policy to create longer term solutions. This vision provides guidance that underpins specific change initiatives to promote coordination and cooperation among local food banks and
Chapter 4  Building and Energizing the Need for Change  123

the provincial bodies, enhance press and community awareness of food bank initiatives and hunger issues, build support in the corporate community, and influence relevant governmental organizations and departments on matters related to hunger and food security. The vision grew out of restructuring and revitalization initiatives by the food bank community around 2006. At that time the new CEO and other staff members were recruited, the board and its governance processes were restructured, branding activities for the national organization were undertaken, and the approaches to advocacy and outreach were revitalized. As the result of these initiatives, Food Banks Canada has improved its reputation with government, national private sector organizations (e.g., grocery chains and food manufacturers), and affiliated local food banks as a credible and respected national voice on hunger issues, and an effective deliverer of related services. Donations (food, money, and related services such as trucking) are significantly stronger now. Awareness levels related to domestic hunger have also increased. The release of their data-rich annual publication, *HungerCounts*, now generates significant media attention and commentary by the sorts of individuals who can make a difference.86

Lipton provides a pragmatic view of what makes for an effective vision statement. He argues that it needs to convey three key messages: (a) the mission or purpose, (b) the strategy for achieving the mission, and (c) the elements of the organizational culture that seemed necessary to achieving the mission and supporting the strategy.87 He believes a vision will be more likely to fail when:

- Actions of senior managers are incongruent with the vision. They fail to walk the talk.
- It ignores the needs of those who will be putting it into practice.
- Unrealistic expectations develop around it that can’t possibly be met.
- It is little more than limited strategies, lacking in a broader sense of what is possible.
- It lacks grounding in the reality of the present that can be reconciled.
- It is either too abstract or too concrete. It needs to stimulate and inspire, but there also needs to be the sense that it is achievable.
- It is not forged through an appropriately messy, iterative, creative process requiring a combination of “synthesis and imagination.”
- It lacks sufficient participation and involvement of others to build a consensus concerning its appropriateness.
- Its implementation lacks “a sense of urgency...and measurable milestones.”88

Lipton’s list provides change leaders with a set of factors to consider when developing and operationalizing their vision for change. Are their actions aligned with the vision? Have they considered the needs of those who will be putting it into practice? If not, Lipton would argue that you are lowering the motivational and
directional value the change vision can provide. Conversely, if they are present, the power of the change vision is enhanced.

Change visions need to paint pictures that challenge the imagination and enrich the soul. Too many vision statements are insipid and dull. Too often they represent generic pap—right-sounding words but ones devoid of real meaning, designed for plaques and outside consumption and not rooted in the heart of the organization. Such visions focus on the lowest common denominator, something politically neutral that no one could object to. By trying to say everything or appeal to everyone, they say nothing and appeal to no one.89

Table 4.2 contains the Handy-Dandy Vision Crafter, a cynical view of organizational vision statements and how they are developed. While many statements may end up containing words similar to those in the model, the Handy-Dandy Vision Crafter ignores the hard work and the difficult creative process and activities that organizations go through to develop a vision statement that works for them. In many ways, the process of developing the change vision is as important as the vision itself. However, too many vision statements read as if the Vision Crafter had been used to create them.

Sometimes a quick statement, a slogan, can serve as a vision proxy. Consider the following statements:

- Every life deserves world-class care (Cleveland Clinic)
- Think differently (Apple Computers)
- Saving people money so they can live better (Walmart)
Inspire the world, create the future (Samsung)
To organize the world’s information and make it universally accessible and useful (Google)
The greatest tragedy is indifference (Red Cross)
Grace, space, pace (Jaguar)
Play on (Lego)

These slogans are tied to statements of mission and vision, and they provide messages that are clear to employees and customers alike. They are meant to reflect underlying values that the organization holds dear and can help provide continuity with the change vision. Consider, for example, the one adopted by the Cleveland Clinic. If you were to take the words at their face value and were an associate there, change initiatives that facilitate access for the poor at the Cleveland Clinic are more likely to be viewed as positive change initiatives than ones focused solely on improving profitability, because they have the potential to be consistent with what the organization is all about.

The slogan “Quality is job #1” was used by Ford to symbolize its determination to improve quality in the 1980s. In the aftermath of quality and safety concerns that buffeted Ford, the automaker successfully used these words, with an accompanying concerted program of action, to refocus employee and public perceptions of the importance of quality to Ford and, ultimately, the excellence of its products. This major initiative spanned several years and was ultimately successful in taking root in the minds of employees and the public. However, the Ford Explorer/Firestone controversy in 2000 concerning vehicle stability in emergency situations reopened public questions of Ford's commitment to quality and safety and put extreme internal and external pressure on Ford and Bridgestone (Firestone’s parent organization) to restore the public trust. The lesson to draw from Ford's experience is that an image built on a vision that took years to develop can be shattered quickly. Ford appears to have learned from the experience and their recent slogan, “Drive Further,” is intended to address customer concerns around quality by committing to deliver products that are up to the challenge.

GM is relearning this lesson now, due to its decade-long failure to address an ignition switch problem that has resulted in a number of deaths, lawsuits, and the recall of approximately 18 million cars in North America in 2014. Mary Barra (the new CEO) is working hard to get out in front of this horrible situation, be transparent with the internal and external investigations, take concerted action to address the issue, and restore public confidence that inaction such as this will not recur under her watch at the “new” GM.

Johnson & Johnson's response to the 1982 Tylenol deaths and tampering of bottles scare and Procter & Gamble's response to inappropriate competitive intelligence activities related to hair care products provide two examples of how clear vision can help organizations develop change initiatives that respond effectively to potentially damaging events. In the case of Tylenol, this best-selling brand was pulled from store shelves until the company was confident it had effectively addressed the risk of product tampering, at the cost of tens of millions of dollars. In the Procter & Gamble situation, when the CEO found out, he fired those involved,
informed P&G’s competitor that it had been spied upon, took appropriate action with respect to knowledge that P&G had inappropriately gained, and negotiated a multimillion-dollar civil damage payment to the aggrieved competitor. The actions of these two firms demonstrated their commitment to their respective visions of how they should operate and reinforced public and employee confidence in the firms and what they stood for.

Compare Procter & Gamble’s and Johnson & Johnson’s responses with Toyota’s initial reactions to safety concerns in 2009 and 2010. The Toyota vision in 2010 was to become the most successful and respected car company in each market around the world by offering customers the best purchasing and ownership experience. However, one wonders if the desire to become the largest and most successful auto firm got in the way of the vision for respect that would be linked to quality and the willingness to put the needs of customers ahead of the company’s own. The response to safety concerns was initially slow and defensive, and Toyota paid a very heavy price in lost sales and damaged reputation and brand. It was ranked the seventh most admired company in the world by *Fortune* in 2010, dropped to 33 for 2011 and 2012, and is slowly regaining ground, landing 29th on the list in 2013.

As noted earlier, companies can be trapped by the existing vision of their organization. Goss, Pascale, and Athos argue that (a) narrow definitions of what the company is about, (b) failure to challenge the accepted boundaries and assumptions of the company, and (c) an inability to understand the context leads to inadequate or mediocre visions. They show the problems that can occur when a vision is achieved—now what? Once the vision is achieved, motivation is lost. It is a bit like a team whose vision was to “make it to the Super Bowl”—it is at a distinct disadvantage when playing against a team whose vision is to “win the Super Bowl.”

Once the vision is clear, the issue becomes one of enactment by employees. Storytelling is a technique employed by change leaders to communicate a vision and mobilize awareness and interest. Because people identify with and remember stories, change agents can use stories in several ways: to create contextual awareness of how an organization got to its problematic condition; to demystify data; to clarify a change initiative and why a particular course of action makes sense; to relieve or increase tension and awareness; and finally, to instill confidence. The multiple uses of stories make storytelling a critical skill for change leaders. Some have referred to this as ways to increase the stickiness or memorableness of the message and enhance its meaningfulness. To increase the stickiness, Cranston and Keller recommend framing the stories five different ways. By this they mean not stopping the message for change after the traditional data-based approach that either demonstrates shortfalls (here is how we’re falling behind and need to improve) or opportunities. In addition to this, they recommend also framing the stories in terms of the impact of the change vision on society, the customer, the work team, and the individuals. Which messages are you more likely to remember—stories about positive impacts on you, your work team, your customers, and society,
Wheatley argues that one must “get the vision off the walls and into the halls.” She claims that people are often trapped by a mechanical view of vision, one that is limited to only a directional component of vision (vision as a vector). She argues that vision should be viewed as a field that touches every employee differently and is filled with eddies and flux and shifting patterns. This view emphasizes the need to understand how each individual “sees” or “feels” the vision. As Beach says, “Each member (of the organization) has his or her own vision.” Somehow, these individual visions need to be combined into an overall sense of purpose for the organization. The active engagement and involvement of employees (or their representatives) in the development, communication, and enactment of the vision for change is a strategy that has been effectively used to advance the creation of a shared sense of purpose. Twenty-six centuries ago, Lao Tzu observed that “the best change is what the people think they did themselves.”

The Difference Between an Organizational Vision and a Change Vision

While the rules for crafting a vision remain the same, the focus of the vision shifts depending upon the level and position of the change leader. Different parts of the organization will focus the vision for their areas in ways that reflect the aspirations for their part of the enterprise. They should be aligned with the overarching vision but differentiated in ways that generate meaning and energy for those involved with that part of the enterprise. Whereas the corporate vision is about the longer-term future, the change vision is shorter term in its perspective, and more specific as to the targets for change, the tangible outcomes to be achieved, and the anticipated impact. In other words, it is focused on the specific changes to be implemented. By definition, they are designed to contribute to the vision of the organization but are more focused in their scope, and often require the cooperation of others to bring them to fruition.

This is easy to understand when the divisions are involved with different products/services and/or different markets, but it also holds for other functions within the organization, such as manufacturing, marketing, or accounting services. For example, a staff support function such as HR will have a change focus that is largely internal to the organization, because that is where most of its customers and products/services lie. However, a vision for change focused on improving HR’s ability to successfully recruit and retain external talent would involve an external focus plus the needed alignment of internal systems and processes to produce the desired results for the organization. If you are an organization needing to scale your operations rapidly, change initiatives that facilitate the recruitment, development, and retention of talented employees takes on added urgency—something firms such as Infosys and Tata Consulting, know all too well. In 2014, Infosys reported they were planning to add 3,500 employees to just two of their Indian development centers and were striving to keep their attrition rate at 12% or lower. To promote their image as a desirable employer, they had, among many internal and external initiatives,
undertaken specific outreach initiatives to educational institutions and had distributed 10,000 electronic notebooks to students studying in government schools in regions near the two development centers.\textsuperscript{104}

Change leaders’ goals are advanced when they develop compelling messages that appeal to the particular groups of people critical to the change initiative. However, in practice, there will be tensions between the changes proposed and what other parts of the organization are attempting to accomplish. For example, the sales force may be focused on how quickly it is able to respond to customers with the products they require, while manufacturing may be rewarded for how efficiently it is able to operate rather than how quickly it is able to respond to a customer order. These tensions need to be recognized and managed so that the needed changes do not flounder, and various approaches for handling this will be addressed in subsequent chapters.

When change leaders develop their vision for change, they are challenged with the question of where to set the boundaries. A narrower, tighter focus will make it easier to meet the test of Jick’s characteristics of effective vision for a specific target audience, but it may also reduce the prospects for building alliances and a broad base of support for change. As the need for change extends to strategic challenges and the cultural dimensions of a firm, this issue of building a larger constituency for the change becomes increasingly important. Two questions must be answered: First, where, if anywhere, do common interests among stakeholders lie? Second, can the vision for change be framed in terms of the common interest without diverting its purpose to the point where it no longer delivers a vision that will excite, inspire, and challenge?

This was a challenge that Dr. Martin Luther King met superbly. In 1963, King stood on the steps of the Lincoln Memorial and delivered his famous “I Have a Dream” speech on the 100th anniversary of the publishing of the Emancipation Proclamation by President Lincoln. This was a critical point in the Civil Rights Movement, and Dr. King succeeded in seizing that moment by enunciating a compelling vision that embraced a large coalition. Attention to the coalition is apparent in his words:

\begin{quote}
The marvelous new militancy which has engulfed the Negro community must not lead us to distrust all white people, for many of our white brothers, as evidenced by their presence here today, have come to realize that their destiny is tied up with our destiny and their freedom is inextricably bound to our freedom. We cannot walk alone.
\end{quote}

Dr. King then went on to set out a vision in language all would understand: “I have a dream that one day this nation will rise up and live out the true meaning of its creed: We hold these truths to be self-evident: that all men are created equal.”\textsuperscript{105}

A broadly stated vision will potentially appeal to a broader range of people and engage a more diverse group in a change process. For example, the National Campaign to Prevent Teen Pregnancy appealed to a very broad range of groups, from Catholics who opposed abortion to Planned Parenthood who accepted abortion.\textsuperscript{106} Regardless of their specific positions, all groups wanted to prevent teen pregnancy. However, each of these groups had different ideas about the strategies
for prevention. The risk of a broad change vision is that their appeal to particular groups may either be watered down, or the coalitions attracted to them may subsequently break down when the vision gets translated into actions.

Coalitions that can develop around a common vision can be surprising. Who would have thought that Ted Olson, a very prominent conservative Republican lawyer, and David Boies, a prominent liberal lawyer, who had faced off in courts over the matter of hanging chads in the 2000 U.S. presidential election, would become co-counsels in the successful litigation efforts to defeat the Defense of Marriage Act and California’s Proposition 8, that culminated in a decision in their favor in the Supreme Court of the United States? Likewise, the ability for environmentalists and conservative Republicans to forge a common cause around the reduction of fossil fuel consumption is not something many expected, but it now exists. Though their perceptions of the underlying rationale for the need for change are different, they were able to identify a common vision for change:

**REDUCING FUEL CONSUMPTION AS A COMMON VISION**

Environmentalists and groups of conservative Republicans are stepping up a campaign to promote alternative-fuel vehicles and wean the USA from dependence on foreign oil. While still skeptical about links between autos and global warming, the conservatives have concluded that cutting gasoline consumption is a matter of national security.

Right-leaning military hawks—including former CIA Director R. James Woolsey—have joined with other conservative Republicans and environmental advocates such as the Natural Resources Defense Council to lobby Congress to spend $12 billion to cut oil use in half by 2025. Their vision is to end America’s dependence on foreign oil, build a sustainable energy system, and, in the process, create millions of jobs. The alliance highlights how popular sentiment is turning against the now worries gas-guzzling culture and how alternative technologies such as gas–electric hybrids are finding increasingly widespread support.

“I think there are a number of things converging,” said Gary L. Bauer, a former Republican presidential candidate and former head of the Family Research Council who has signed on to a strange-bedfellows coalition of conservatives and environmentalists called Set America Free. “I just think reasonable people are more inclined right now to start thinking about ways our country’s future isn’t dependent on . . . oil from a region where there are a lot of very bad actors.”

**Examples of Organizational Change Visions**

In the past, visions have generally been viewed as organization-level statements. However, change programs can benefit from a clear sense of direction and purpose that vision statements provide. The most powerful visions tap into people’s need to be part of something transformative and meaningful. Mundane but important change programs involving restructuring or profit-focused issues need clear, concise targets.
Here are some examples of organizational change visions:

**Google’s Implied Vision for Change in Telecommunications**

Give carriers less control over what they can and cannot do with their networks through promoting net neutrality, developing Google’s own mobile phone and operating system, and through forcing the carriers to build more high-speed networks through the threat that Google will do it if they don’t.109

**Xerox’s Vision for Creating Agile Business Processes**

Our research in ethnography, computer vision, natural language, and machine learning aims to automate business processes via flexible platforms that run on robust and scalable infrastructures. By implementing our solutions on state-of-the-art, cloud-based frameworks, we enable scalability and availability, while ensuring security and integrity of vital corporate assets.110

**IBM—Diversity 3.0**

IBM has a long history of commitment to diversity and has consistently taken the lead on diversity policies long before it was required by law. It began in the mid-20th century, grounded in Equal Opportunity Legislation and compliance (Diversity 1.0). We moved forward to Diversity 2.0 in the 1990s with a focus on eliminating barriers, and understanding regional constituencies and differences between the constituencies. As our demographics changed, we adapted our workplace to be more flexible and began our focus on work-life integration. In addition, over the past 5 years, we’ve introduced IBM’s Values, which links to our diversity work.

This strong foundation brings us to where we are today—Diversity 3.0. This is the point where we can take best advantage of our differences—for innovation. Our diversity is a competitive advantage and consciously building diverse teams helps us drive the best results for our clients.111

**Ronald McDonald House Charities (RMHC) Vision**

We believe that when you change a child’s life, you change a family’s, which can change a community, and ultimately the world.

As pioneers of providing family-centered care, RMHC strives to be part of the solution in improving the lives of children and their families, providing programs that strengthen families during difficult times.

In 2014, we launched the three-year “RMHC Impact Strategy,” with a goal to serve one million more children and their families per year. This strategy not only builds on our success over the last 40 years, but also gives us the foundation to be stronger and more efficient than ever.
In order to do this, we are focusing on three strategic priorities:

- Expanding our reach by both creating and growing existing programs—including Ronald McDonald Houses and Ronald McDonald Family Rooms
- Strengthening our global network through staff development and education, and ensuring the financial sustainability of RMHC and its Chapters around the world
- Mobilizing support to increase the understanding of RMHC programs; thereby allowing us to support more children and families around the world

Through the strong network of RMHC Chapters around the world collectively we are able to identify needs and carry out the RMHC mission on the ground. But we can’t do it alone. We rely on our strong relationships with the medical community to provide access to health care. We rely on the RMHC Mission Partner, McDonald’s, including the corporation, owner/operators, suppliers and customers, as well as other important corporate partnerships. And, we rely on strategic alliances with organizations that have the knowledge and infrastructure to extend our reach. Most of all, we rely on you—our donors, volunteers, staff, and friends.112

**Tata’s Vision for the Nano**

Ratan Tata’s 2003 Vision to his engineering team, led by 32-year-old star engineer Girish Wagh:

Create a $2,000 “people’s car.” It has to be safe, affordable, all weather transportation for a family. It should adhere to regulatory requirements, and achieve performance targets such as fuel efficiency and acceleration.

The result of this vision is the Tata Nano. It gets 50 miles to the gallon, and seats up to five. And at $2,500 before taxes it is the most inexpensive car in the world. In March 2012, Mr. Tata stated that the original vision for the Nano had been achieved, and that the vision had now shifted to further upgrading and refinement of the product.113

At the World Wildlife Fund (WWF) we protect wildlife, preserve habitats and empower people to conserve resources while improving their livelihoods. We understand the close relationship between humans and the environment, and incorporate elements of governance, gender relations, health, and education into our conservation work. Our community conservation program links improving human lives with conserving biodiversity. Through WWF initiatives, communities are given the
opportunity to reduce poverty, improve socio-economic conditions and become environmental stewards for the natural places WWF works to conserve.

Our vision: Build a sustainable balance between people and nature by empowering local communities to reduce poverty, enhance their opportunities and well-being, and strengthen their role as environmental decision makers.\textsuperscript{114}

**Vision for the “Survive to 5” Program**

Save the Children, World Vision, UNICEF and other not-for-profits, have taken up the challenge posed by the World Health Organization, to reduce child mortality by two-thirds, by 2015. Mortality rates had been reduced by 41% between 1990 and 2011, but the refugee crises that have been created by wars and environmental disasters were complicating efforts, giving rise to a call for the United Nations for a redoubling of efforts.\textsuperscript{115}

Vision: We believe all children should live to celebrate their fifth birthday.

The Survive to 5 campaign supports Millennium Development Goal 4—to reduce child mortality by two thirds by 2015 and save the lives of over 5 million children under 5 who are dying of preventable and treatable diseases.\textsuperscript{116}

In order to help reduce preventable deaths, Survive to 5 will work in countries where basic health care is inaccessible to large numbers of children. Working with government and private sector health care systems, we will develop policy environments that are conducive to community-based care and train a cadre of local health care workers to increase health care coverage and ensure linkages and referrals to facilities for more complicated cases. Research shows that simple interventions—including vaccines, oral rehydration therapy, antibiotics for pneumonia and sepsis and medicine to treat malaria—could save some two-thirds of the children who currently do not survive. Clean practices at birth and improved immediate newborn care, such as breastfeeding and special care for low birth weight babies would also contribute to saving young lives.\textsuperscript{117}

**Change Vision for “Reading Rainbow”**

In 2014, LeVar Burton used the crowdsourcing website “Kickstarter” for a campaign to raise $5 million. The short-term change vision is to work together to bring back the “Reading Rainbow” show to PBS, and provide free access to 7,500 classrooms.

The broader vision is to leverage the existing free Reading Rainbow app and make its existing and future content available for free, to each and every web connected child, by developing a web-enabled reading rainbow for the home, create a classroom version with the tools teachers need, and subsidize the cost so it is available to schools for free.\textsuperscript{118}
Visions for change from the starting point for the chain of vision → objectives → goals → activities. To make the change vision tangible, change agents also need to specify measurable goals for their change efforts. The research on goal setting has been quite clear on the benefits of SMART (specific, measurable, attainable, relevant, and time-bound) goals. The provision of direction with measurable results for feedback galvanizes many people to pursue desired aims. This is easy to say, but defining the right measurable goals is not straightforward. Perhaps a critical task is to persuade a key stakeholder to view the change positively. How does one assess when such attitudes are beginning to change and capture the progress? Identifying interim goals, indicators of progress, and key milestones that demonstrate progress toward the end goals of the change vision are challenges that will be dealt with in subsequent chapters. See Toolkit Exercise 4.3 to practice writing a vision statement, then move on to Toolkit Exercise 4.4 to combine your understanding for the need for change and your newly crafted vision statement.

Summary

In summary, change occurs when there is an understanding of the need for change, the vision of where the organization should go, and a commitment to action. Change leaders need to address the question “Why change?” and develop both a sound rationale for the change and a compelling vision of a possible future. Unfreezing organizational members is advanced when these have been effectively executed.

The rationale for change emerges from a sound understanding of the situation: the external and internal data that point to a need for change, an understanding of the perspectives of critical stakeholders in the organization, internal data in the organization that affects any change, and the personal needs and abilities of the change leaders themselves. Critical in this is an understanding of the organization’s readiness for change and the awareness of the need for change throughout the organization. Finally, the chapter discusses the creation of powerful visions and how to develop a specific change vision.

In addition to creating appealing visions of the future and demonstrating a compelling need for change, change agents need to understand the particular contexts of the major individuals in the change events. These stakeholders, or key players, will have an impact on the change situation, so their motives and interests need to be analyzed. Likewise, the impacts of formal structures, systems, and processes on the change need to be assessed and understood. The next two chapters explore these topics. See Toolkit Exercise 4.1 for critical thinking questions for this chapter.

---

§We use the following definitions. Mission means the overall purpose of the organization. Vision means the ultimate or ideal goal pursued. Thus, for a social service agency, the mission might be to look after the homeless and improve their health outcomes. The vision could be to eradicate homelessness and related health issues in the community by 2020. The change vision related specifically to accommodations might then be to provide access to safe, affordable housing for 60% of the homeless in the community within the next three years.
Key Terms

**Need for change**—the pressure for change in the situation. This need can be viewed as a “real” need, that demonstrated by data and facts, and a “perceived” need, that seen by participants in the change.

Developing a perspective on the need for change is aided by (a) seeking out external data, (b) seeking out the perspective, (c) seeking out data internal to the organization, and (d) reflecting upon personal concerns and perspectives of the change leader.

**Perspectives of key internal and external stakeholders**—the unique point of view of important participants in the change process. Understanding this perspective is critical to recognizing why this stakeholder supports or resists change.

**Readiness for Change**

**Organizational readiness for change**—the degree to which the organization as a whole perceives the need for change and accepts it.

**Individual readiness for change**—the degree to which the individual perceives the need for change and accepts it.

**Readying an organization for change**—can be done through the use of a variety of strategies, including (a) creating a crisis, (b) developing a vision that creates dissatisfaction with the status quo in the organization, (c) finding a champion-of-change leader who will build awareness of the need for change and articulate the vision for change, (d) focusing on common or superordinate goals, and (e) creating dissatisfaction with the status quo through education, information, and exposure to superior practices and processes of both competitors and non-competitors. Different strategies have different strengths and weaknesses associated with them.

**Eight dimensions related to readiness**—trustworthy leadership, trusting followers, capable champions, involved middle management, innovative culture, accountable culture, effective communications, and systems thinking.

**Strategic frames**—the mental models or sets of assumptions held by change participants about how the world works. These can block the recognition for the need for change.

**Vision**

**Vision for change**—the idealized view of the short-term future after a specific change has been enacted. Change visions are more specific than organizational visions and have some element of a time constraint.
Organizational vision—the idealized view of the future. The vision needs to be:
(a) clear, concise, easily understood; (b) memorable; (c) exciting and inspiring;
(d) challenging; (e) excellence centered; (f) stable but flexible; and (g) implementable and tangible.

Leader-developed vision—developed directly by the change leader.

Leader–Senior-team-developed vision—developed by the senior management group in conjunction with the change leader.

Bottom-up visioning—engages a broader spectrum of organizational members in the vision framing process. The change vision is developed through the active participation of those responsible for implementing the change, including those on the front line.
A Checklist for Change: Creating the Readiness for Change

1. What is the “objective” need for change? That is, what are the consequences to the organization of changing or not changing? Are people aware of these risks?

2. Are organizational members aware of the need for change? Do they feel the need for change, or do they deny its need? How can they be informed?

3. Remember that individuals are motivated toward change only when they perceive the benefits as outweighing the costs. How can you, as a change leader, help employees see the benefits as outweighing the costs?

4. If individuals believe the benefits outweigh the costs, do they also believe the probability of success is great enough to warrant the risk taking, including the investment of time and energy that the change will require?

5. What change alternatives are people predisposed to? What are the costs, benefits, and risks that make them attractive? How should these alternatives be addressed by the change leader?
END-OF-CHAPTER EXERCISES

TOOLKIT EXERCISE 4.1

Critical Thinking Questions

Please find the URL for the video listed below on the website at study.sagepub.com/cawsey3e. Consider the questions that follow.

1. **David Logan: Tribal Leadership**—16:36 minutes

This video focuses on five kinds of tribes that people naturally form and how they influence behavior.

- Describe Logan's theory on tribes.

- Compare Logan's ideas with tribes you've been a part of in the past.

- Reflect on how Logan's idea of Tribal Leadership may affect how to approach change.

2. There are lots of great examples of leaders communicating their vision for change, such as Martin Luther King, Nelson Mandela, Malala Yousafzai, Steve Jobs, Howard Schultz, Indra Nooyi, Hillary Clinton, and Melinda Gates.

- Go to the Web and find a powerful vision for change speech that resonates with you. What is it about the one you selected that resonates with you?

- Does it share the characteristics of an effective vision statement outlined in the text?

TOOLKIT EXERCISE 4.2

Developing the Background to Understand the Need for Change

As suggested earlier in this book, a careful diagnosis is essential for successful organizational change. Much of this diagnosis is needed to understand the need for change that the organization faces and then to engage and persuade organizational members concerning the need for change.

1. Consider an example of an organizational change that you are familiar with or are considering undertaking. What data could help you understand the need for change?

2. Have you:
   a. Understood and made sense of external data? What else would you like to know?
   b. Understood and made sense of the perspectives of other stakeholders? What else would you like to know?
   c. Understood and assessed your personal concerns and perspectives and how they may be affecting your perspective on the situation?
   d. Understood and made sense of internal data? What else would you like to know?

3. What does your analysis suggest to you about the need for change?

Please see study.sagepub.com/cawsey3e for a downloadable template of this exercise.
TOOLKIT EXERCISE 4.3

Writing a Vision Statement

Think of an organization you are familiar with that is in need of change. If you were the change leader, what would be your vision statement for change?

1. Write your vision statement for the change you are striving for.

2. Evaluate your vision. Is it:
   - Clear, concise, and easily understood?
   - Memorable?
   - Exciting and inspiring?
   - Challenging?
   - Excellence centered?
   - Stable and yet flexible?
   - Implementable and tangible?

3. Does the vision promote change and a sense of direction?

4. Does the vision provide the basis from which you can develop the implementation strategy and plan?

5. Does the vision provide focus and direction to those who must make ongoing decisions?

6. Does the vision embrace the critical performance factors that organizational members should be concerned about?

7. Does the vision engage and energize as well as clarify? What is the emotional impact of the vision?
8. Does the vision promote commitment? Are individuals likely to be opposed to the vision, passive (let it happen), moderately supportive (help it happen), or actively supportive (make it happen)?

9. Now assess your vision on a scale of 1 to 5 (5 being the highest) relative to the factors set out below.
   a. Actions of senior managers are congruent with the vision. They walk the talk.
      1 2 3 4 5
   b. It pays attention to the needs of those who will be putting it into practice.
      1 2 3 4 5
   c. Realistic expectations develop around it that are challenging but can be met.
      1 2 3 4 5
   d. It communicates a broader sense of what is possible.
      1 2 3 4 5
   e. It is grounded in the reality of the present and can be reconciled with it.
      1 2 3 4 5
   f. It is neither too abstract nor too concrete. It has the potential to stimulate and inspire, but it also communicates the sense that it is achievable.
      1 2 3 4 5
   g. It has been forged through an appropriately messy, iterative, creative process requiring a combination of "synthesis and imagination."
      1 2 3 4 5
   h. It has sufficient participation and involvement of others to build a consensus concerning its appropriateness.
      1 2 3 4 5
   i. Its implementation contains "a sense of urgency . . . and measurable milestones."
      1 2 3 4 5

10. Given your assessment of the above items, what would you recommend be done in order to strengthen the value of the change vision?

   Please see study.sagepub.com/cawsey3e for a downloadable template of this exercise.
TOOLKIT EXERCISE 4.4
Putting the Need for Change and the Vision for Change Together

For any change to be successful, the need for change must be real and must be perceived as real. If the organization does not accept the need for change, the chances of anything substantive happening are negligible. Thus, developing the need for change is vital. Understanding the gap between what is and what is desired is important in order to accurately describe the need for change.

Think of the situation you were considering in Exercise 4.2.

1. What is the gap between the present state and the desired future state?

2. How strong is the need for change?

3. What is the source of this need? Is it external to the organization?

4. Is there tangible evidence of the need for change in that there is concrete evidence of the need or a crisis situation that demonstrates the need for change?

5. If the change does not occur, what will be the impact on the organization in the next two to six years?

6. What is the objective, long-range need to change?
People can be motivated by higher-order purposes, things that relate to fundamental values. Change visions can be crucial in capturing support for change and in explaining the nature of change to others. Creating such a change vision is tricky. If one aims too high, it taps into higher values but often fails to link with the specific change project or program. If one aims too low, the vision fails to tap into values that motivate us above and beyond the ordinary. Such a change vision looks like and feels like an objective.

7. Return to the change vision you developed in Exercise 4.2. Does it capture a sense of higher-order purpose or values that underpin the change and communicate what the project is about?

8. Explain how the vision links the need for change.
