Clinical Psychological Science publishes advances in clinical science and provides a venue for cutting-edge research across a wide range of conceptual views, approaches, and topics. The Journal encompasses many core domains that have defined clinical psychology, but also boundary-crossing advances that integrate and make contact with diverse disciplines and that may not easily be found in traditional clinical psychology journals. Among the key topics are research on the underlying mechanisms and etiologies of psychological health and dysfunction; basic and applied work on the diagnosis, assessment, treatment, and prevention of mental illness; service delivery; and promotion of well-being.

The Association for Psychological Science (APS), founded in 1988, is a non-profit international organization dedicated toscientific psychology. The Association’s mission is to promote, protect, and advance the interests of scientifically oriented psychology in research, application, teaching, and the improvement of human welfare.
